**SERVICE  
MANUAL**

## NOTICE

This manual has been prepared by the Yamaha Motor Company primarily for use by Yamaha dealers and their trained mechanics when performing maintenance procedures and repairs to Yamaha equipment. It has been written to suit the needs of persons who have a basic understanding of the mechanical and electrical concepts and procedures inherent in the work, for without such knowledge attempted repairs or service to the equipment could render it unsafe or unfit for use.

Because the Yamaha Motor Company Ltd. has a policy of continuously improving its products, models may differ in detail from the descriptions and illustrations given in this publication. Use only the latest edition of this manual. Authorized Yamaha dealers are notified periodically of modifications and significant changes in specifications and procedures, and these are incorporated in successive editions of this manual.

A12001-2

## HOW TO USE THIS MANUAL

### MANUAL FORMAT

All of the procedures in this manual are organized in a sequential, step-by-step format. The information has been compiled to provide the mechanic with an easy to read, handy reference that contains comprehensive explanations of all disassembly, repair, assembly, and inspection operations.

In this revised format, the condition of a faulty component will precede an arrow symbol and the course of action required will follow the symbol, e.g.,

- Bearings
- Pitting/Damage → Replace.

To assist you to find your way about this manual, the Section Title and Major Heading is given at the head of every page.

On the first page of each Section is an Index of that section's contents.

### MODEL INDICATION

Multiple models are shown in this manual. These indications are noted as follows.

Model name	9.9F	15F
USA and CANADA name	9.9MH, 9.9EH, 9.9ER	15MH, 15EH
Indication	9 9	15

### THE ILLUSTRATIONS

Some illustrations in this manual may differ from the model you have. This is because a procedure described may relate to several models, though only one may be illustrated. (The name of model described will be mentioned in the description).

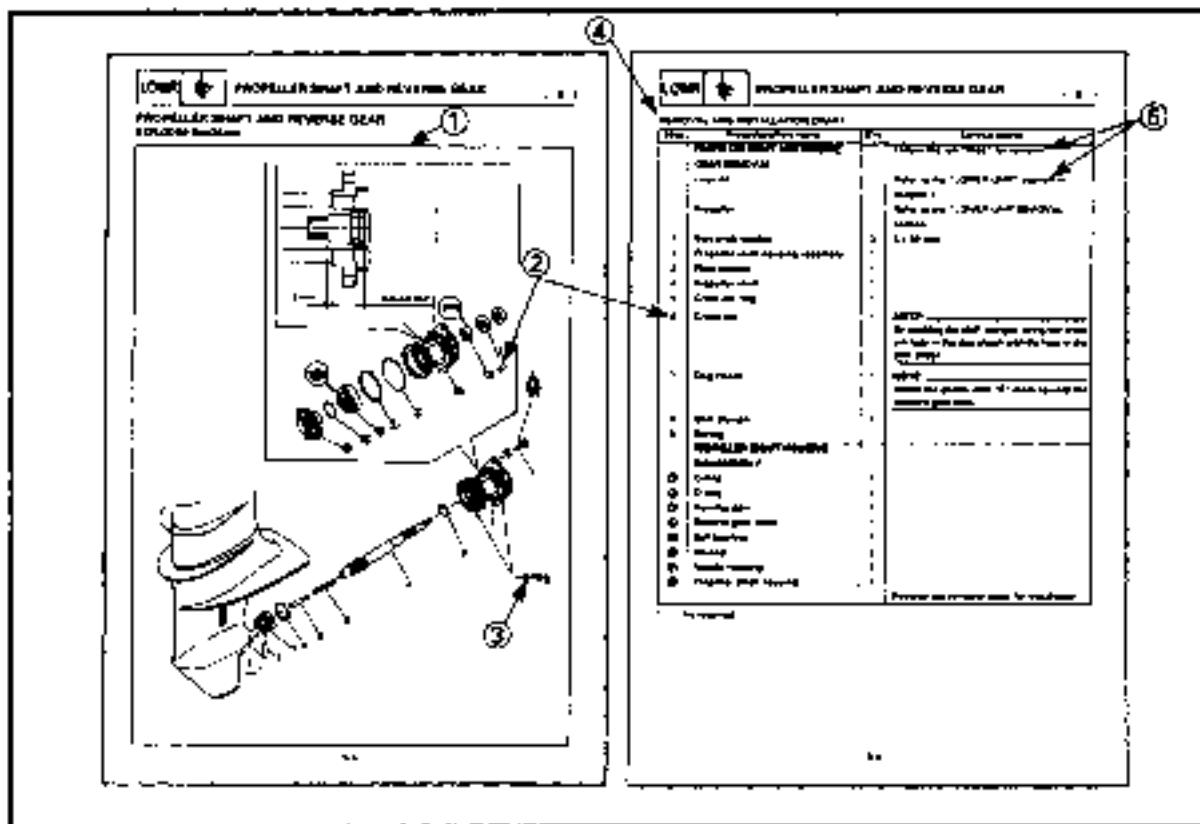

### REFERENCES

These have been kept to a minimum; however, when you are referred to another section of the manual, you are told the page number to go to.

---

## HOW TO READ DESCRIPTIONS

1. A disassembly installation job mainly consists of the exploded diagram ①.
2. The numerical figures represented by the number ② indicates the order of the job steps.
3. The symbols represented by the number ③ indicates the contents and notes of the job.  
For the meanings of the symbols, refer to the next page(s).
4. The REMOVAL AND INSTALLATION CHART ④ is attached to the exploded diagram and explains the job steps, part names, notes for the jobs, etc.
5. The SERVICE POINTS, other than the exploded diagram, explains in detail the items difficult to explain in the exploded diagram or REMOVAL AND INSTALLATION CHART, the Service points requiring the detailed description ⑤ ,etc.

---

## **WARNINGS, CAUTIONS AND NOTES**

Attention is drawn to the various Warnings, Cautions and Notes which distinguish important information in this manual in the following ways:

 The Safety Alert Symbol means **ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!**

---

### **WARNING**

---

Failure to follow **WARNING** instructions **could result in severe injury or death to the machine operator, a bystander, or a person inspecting or repairing the outboard motor.**

---

### **CAUTION:**

---

A **CAUTION** indicates special precautions that must be taken to avoid damage to the outboard motor.

---

### **NOTE:**

---

A **NOTE** provides key information to make procedures easier or clearer.

## SYMBOLS

Symbols ① to ⑨ are designed as thumb-tabs to indicate the content of a chapter:

- ① General information
- ② Specifications
- ③ Periodic Inspection and Adjustment
- ④ Fuel system
- ⑤ Power unit
- ⑥ Lower unit
- ⑦ Bracket unit
- ⑧ Electrical system
- ⑨ Trouble-analysis

Symbols ⑩ to ㉔ indicate specific data:

- ⑩ Special tool
- ⑪ Specified liquid
- ⑫ Specified engine speed
- ⑬ Specified torque
- ⑭ Specified measurement
- ⑮ Specified electrical valve  
(Resistance (Ω), Voltage (V), Electric current (A))

Symbols ⑯ to ㉓ in an exploded diagram indicate grade of lubricant and location of lubrication point:

- ㉑ Apply Yamaha 2-stroke outboard motor oil
- ㉒ Apply water resistant grease  
(Yamaha grease A, Yamaha marine grease)
- ㉓ Apply molybdenum disulfide grease

Symbols ㉔ to ㉖ in an exploded diagram indicate grade of sealing or locking agent, and location of application point:

- ㉔ Apply Gasket Maker<sup>®</sup>
- ㉕ Apply Yamabond #4 (Yamaha bond No. 4)
- ㉖ Apply LOCTITE<sup>®</sup> No. 271 (Red LOCTITE)
- ㉗ Apply LOCTITE<sup>®</sup> No. 242 (Blue LOCTITE)
- ㉘ Apply LOCTITE<sup>®</sup> No. 572
- ㉙ Apply Silicon sealant

## NOTE:

In this manual, the above symbols may not be used in every case.

## IDENTIFICATION

### SERIAL NUMBER

The serial number of the outboard motor is stamped on the label attached to the port side of the clamp bracket.

**NOTE:** \_\_\_\_\_

For USA model:

As an antitheft measure, a special label on which the outboard motor serial number is stamped is bonded to the port side of the clamp bracket. The label is specially treated so that peeling it off causes cracks across the serial number.

- (1) Model name
- (2) Approved model No.
- (3) Transom height
- (4) Serial number

## STARTING SERIAL NUMBERS

The starting serial number blocks are as follows:

Model	Approved model code	Starting serial No.
World-wide	USA, CANADA	S: 155562~ L: 455181~ SUL: 850198~
9.9FMH		S: 700301~ L: 800791~ SUL: 900141~

15FEMH	684C	
15FEMHR		

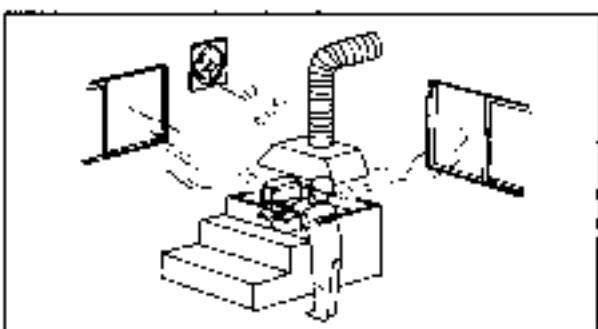

## SAFETY WHILE WORKING

The procedures given in this manual are those recommended by Yamaha to be followed by Yamaha dealers and their mechanics.

### FIRE PREVENTION

Gasoline (petrol) is highly flammable. Petroleum vapor is explosive if ignited. Do not smoke while handling gasoline (petrol), and keep it away from heat, sparks, and open flames.

### VENTILATION

Petroleum vapor is heavier than air and if inhaled in large quantities will not support life. Engine exhaust gases are harmful to breathe. When test-running an engine indoors, maintain good ventilation.

### SELF-PROTECTION

Protect your eyes with suitable safety spectacles or safety goggles when using compressed air, when grinding or when doing any operation which may cause particles to fly off.

Protect hands and feet by wearing safety gloves or protective shoes if appropriate to the work you are doing.

### OILS, GREASES AND SEALING FLUIDS

Use only genuine Yamaha oils, greases and sealing fluids or those recommended by Yamaha.

Under normal conditions of use, there should be no hazards from the use of the lubricants mentioned in this manual, but safety is all-important, and by adopting good safety practices, any risk is minimized. A summary of the most important precautions is as follows:

1. While working, maintain good standards of personal and industrial hygiene.
2. Clothing which has become contaminated with lubricants should be changed as soon as practicable, and laundered before further use.
3. Avoid skin contact with lubricants; do not, for example, place a soiled wiping-rag in one's pocket.
4. Hands, and any other part of the body which have been in contact with lubricants or lubricant-contaminated clothing, should be thoroughly washed with hot water and soap as soon as practicable.
5. To protect the skin, the application of a suitable barrier cream to the hands before working is recommended.
6. A supply of clean lint-free cloths should be available for wiping purposes.

## GOOD WORKING PRACTICES

### 1. The right tools

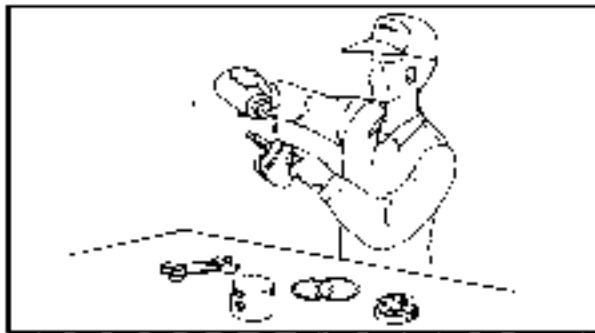

Use the special tools that are advised to protect parts from damage. Use the right tool in the right manner – don't improvise.

### 2. Tightening torque

Follow the torque tightening instructions. When tightening bolts, nuts and screws, tighten the larger sizes first, and tighten inner positioned fixings before outer positioned ones.

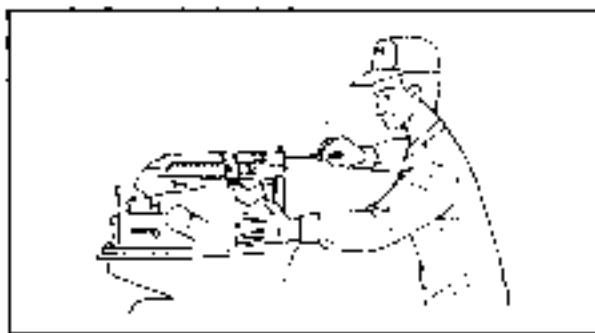

**3. Nonreusable items**

Always use new gaskets, packings, O-rings, oil seals, split-pins and circlips etc. on reassembly.

**DISASSEMBLY AND ASSEMBLY**

1. Clean parts with compressed-air on disassembling them.

2. Oil the contact surfaces of moving parts on assembly.

3. After assembly, check that moving parts operate normally.

4. Install bearings with the manufacturer's markings on the side exposed to view, and liberally oil the bearings.

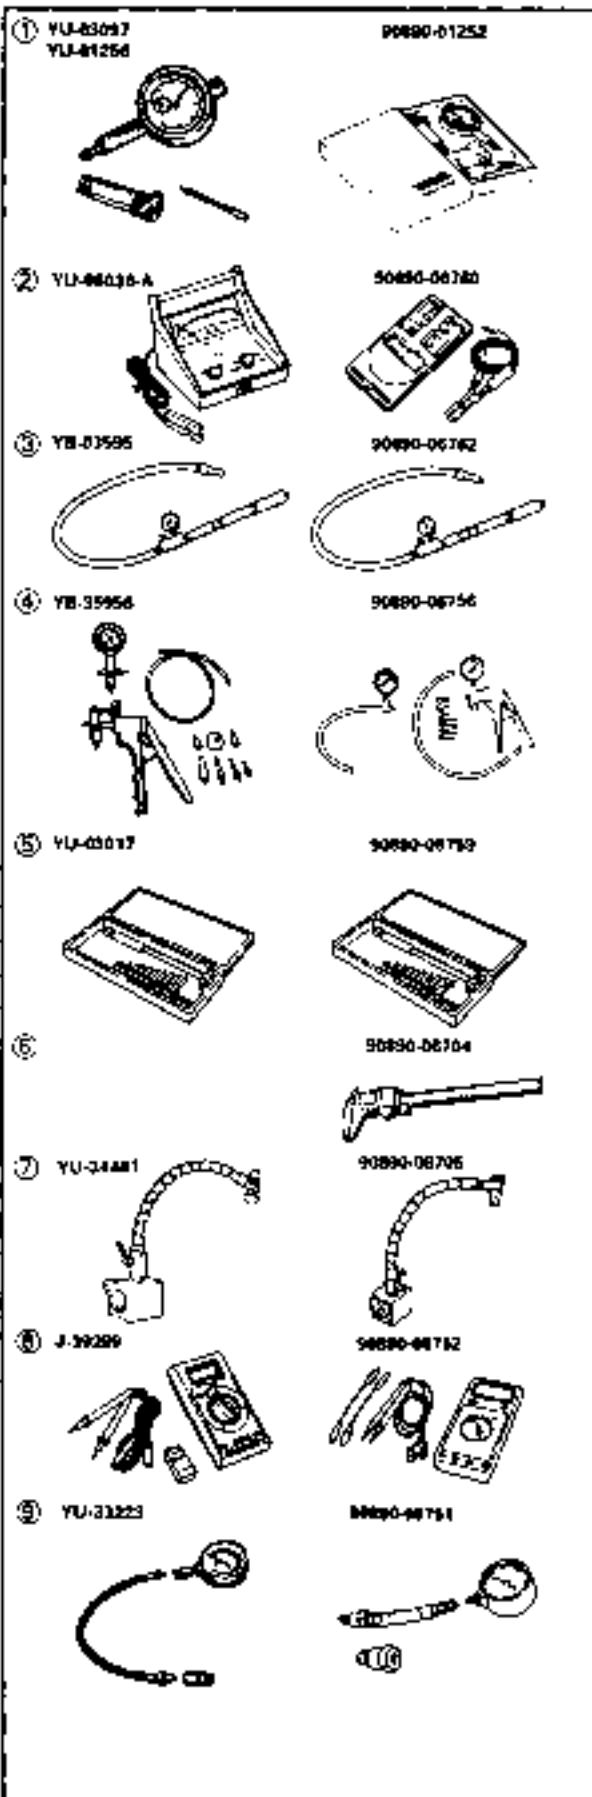

**CAUTION:**

---

**Do not use compressed air to spin the bearings dry. This causes damage to the bearing surfaces.**

---

5. When installing oil seals, apply a light coating of water-resistant grease to the outside diameter.

## SPECIAL TOOLS

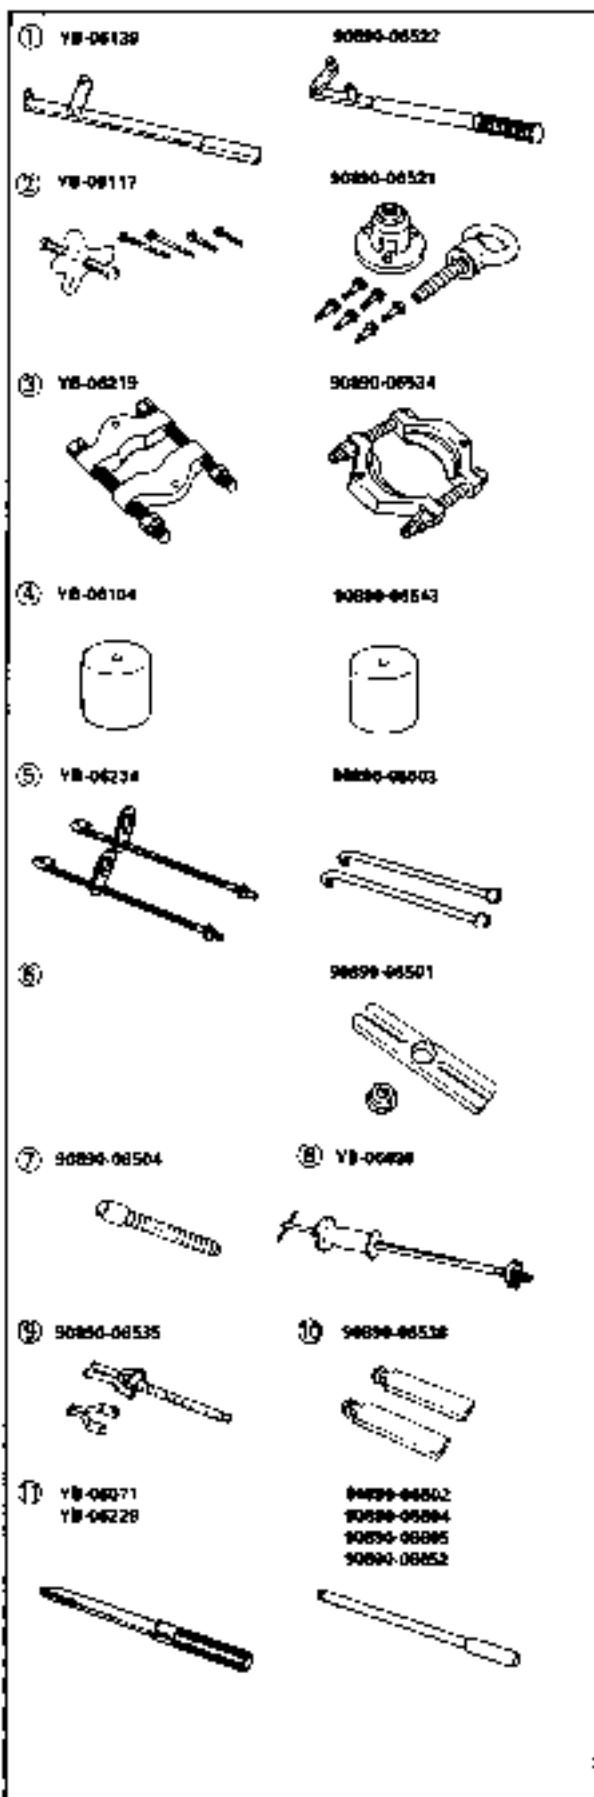

The use of correct special tools recommended by Yamaha will aid the work and enable accurate assembly and tune-up. Improvisations and use of improper tools can cause damage to the equipment.

### NOTE: \_\_\_\_\_

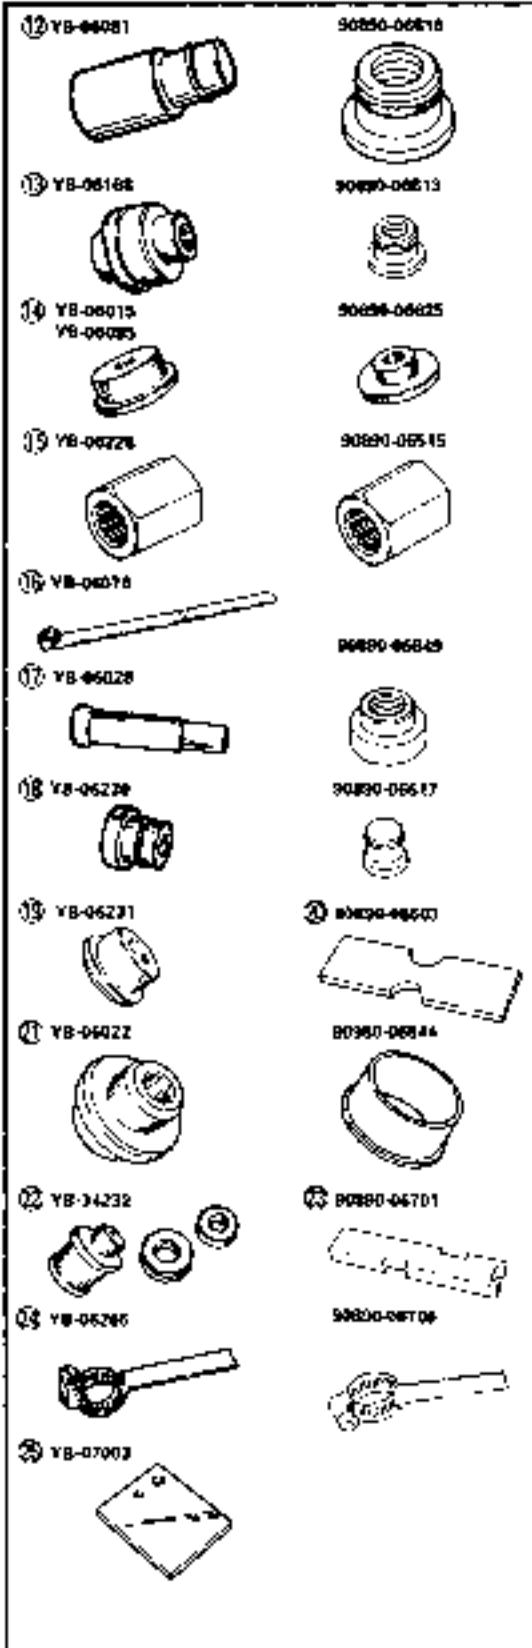

- \*For U.S.A. and Canada, use part number starting with "J-", "YB-", "YM-", "YU-" or "YW-".
  - \*For others, use part number starting with "90890-".

		Nm	m•kg	ft•lb
8 mm	M5	5.0	0.5	3.6
10 mm	M6	8.0	0.8	5.8
12 mm	M8	18	1.8	13
14 mm	M10	36	3.6	26
17 mm	M12	43	4.3	31

**GENERAL TORQUE**

This chart specifies the torques for tightening standard fasteners with standard clean dry ISO threads at room temperature. Torque specifications for special components or assemblies are given in applicable sections of this manual. To avoid causing warpage, tighten multifastener assemblies in crisscross fashion, in progressive stages until the specified torque is reached.

Grease points	Greasing			○		3-10

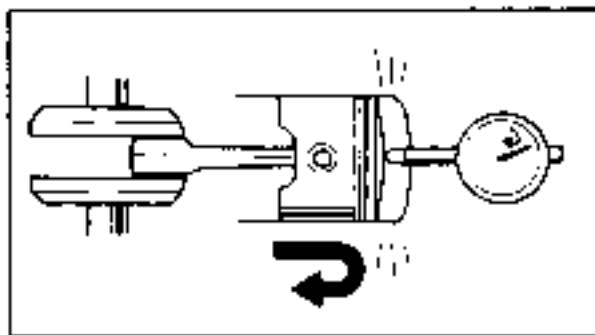

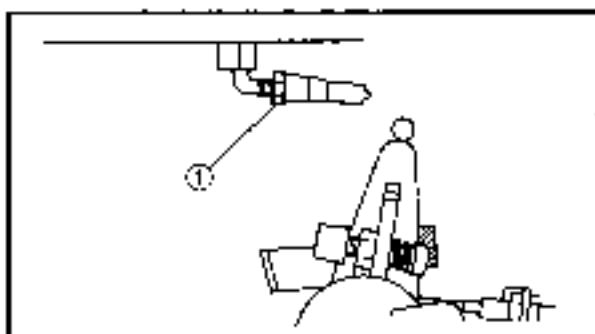

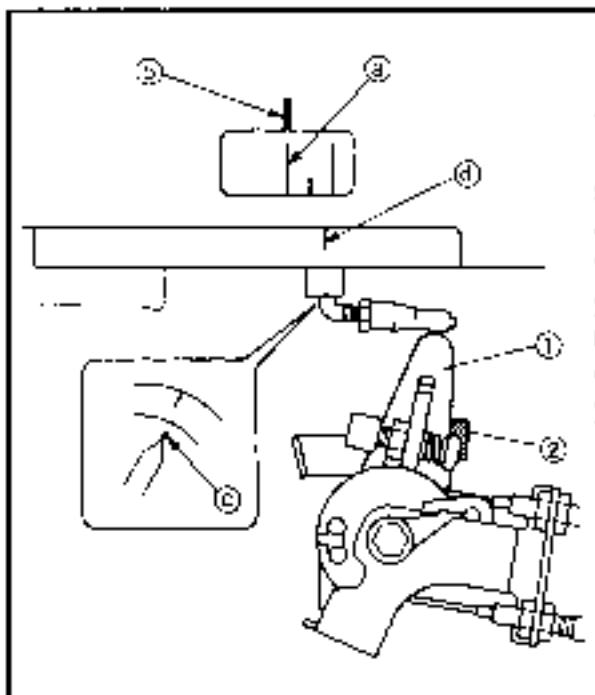

## PERIODIC SERVICE FUEL SYSTEM

### Fuel line

#### 1. Inspect:

- Fuel line  
Break/Leak/Damage → Replace.

## CONTROL SYSTEM

### Ignition timing adjustment

#### 1. Check:

- Fully advanced ignition timing  
Incorrect → Adjust.

#### Checking steps:

- Turn the flywheel clockwise so that its specified marking (3) aligns with the starter cover marking (6).

**Fully advanced position:**  
**30° BTDC**

- Turn the magneto control lever (1) so that it contacts the fully advanced stopper (2).
- Check the timing indicator (3) so that it aligns with the marking (4) on the flywheel.

#### 2. Adjust:

- Link joint

#### Adjustment steps:

- Loosen the lock nut (1).
- Disconnect the link joint from the magneto control lever.
- Remove the spark plug of No. 1 cylinder
- Attach the dial gauge to the spark plug hole.

**Dial gauge:**  
**YU-03097 / 90890-01252**

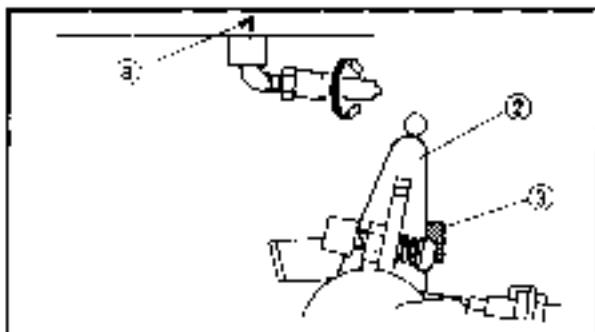

**Dial gauge stand:**

**YU-01256**

- Slowly turn the flywheel clockwise until the piston reaches top dead center (TDC).

**INSP  
ADJ**

## CONTROL SYSTEM

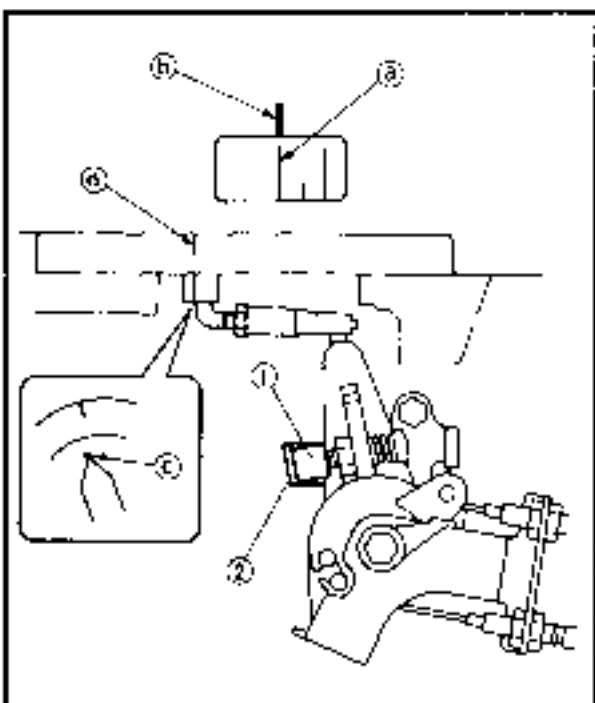

- Set the dial gauge to zero at TDC.
- Turn the flywheel counterclockwise until the dial gauge indicates that the piston position is at a specified distance from TDC.

**Piston position:**

4.22 mm [0.166 in] BTDC

- Turn the magneto control lever ② so that it contacts the fully advanced stopper ③.
- Adjust the link joint length so that the timing indicator aligns with the marking 'a' on the flywheel.
- Tighten the lock nut.

**3. Check:**

- Fully retard ignition timing  
Incorrect → Adjust.

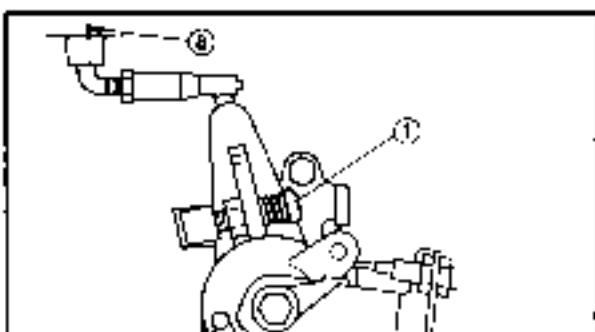

**Checking steps:**

- Turn the flywheel clockwise so that its specified marking 'a' aligns with the starter cover marking 'b'.

**Fully retard position:**

5° ATDC

- Turn the magneto control lever so that the fully retard screw ① contacts the fully retard stopper ②.
- Check the timing indicator ③ so that it aligns with the marking 'd' on the flywheel.

**4. Adjust:**

- Fully retard screw

**Adjustment steps:**

- Turn the flywheel clockwise until the dial gauge indicates that the piston position is at specified distance from TDC.

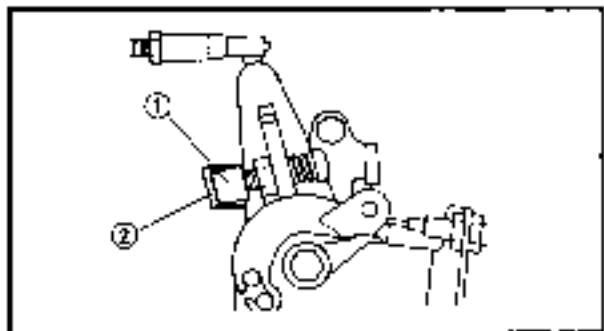

**Piston position:**

0.12 mm [0.005 in] ATDC

**INSP  
ADJ**

## CONTROL SYSTEM

- Turn the magneto control lever so that the fully retard screw contacts the fully retard stopper.
- Adjust the fully retard screw (①) so that the timing indicator aligns with the marking (②) on the flywheel.

### Throttle link adjustment

#### NOTE:

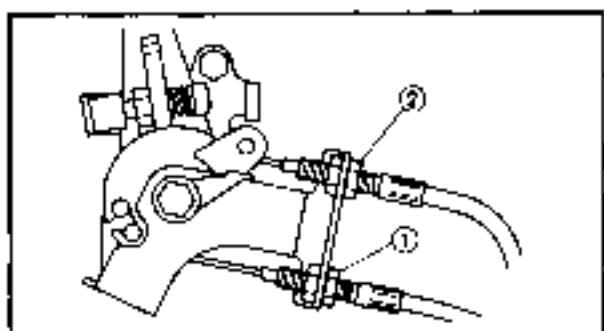

Before adjusting the throttle link, the ignition timing should be adjusted.

#### 1. Inspect:

- Fully closed position  
Incorrect → Adjust.

#### Checking steps:

- Close the throttle grip fully.
- Check the fully retard screw (①) so that it contacts the fully retard stopper (②).

#### 2. Adjust:

- Throttle cable adjuster

#### Adjustment steps:

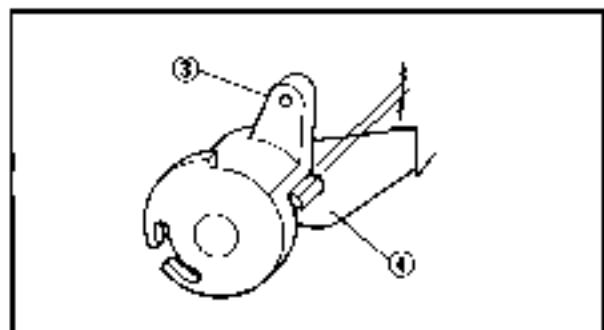

- Loosen the lock nuts (①), (②).
- Turn the magneto control lever until the fully retard screw contacts the fully retard stopper.
- Adjust the throttle cable adjuster until there is specified free play between the stoppers of the pulley (③) and free acceleration lever (④).

#### Free play:

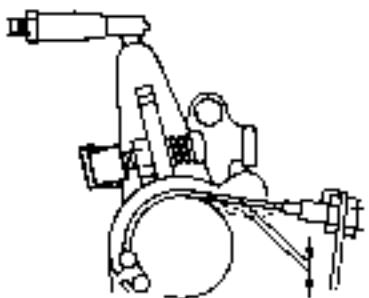

1 mm (0.04 in)

- Tighten the lock nut (①).

**INSP  
ADJ**

## CONTROL SYSTEM

- Adjust the throttle cable adjuster until there is specified free play on the throttle cable.

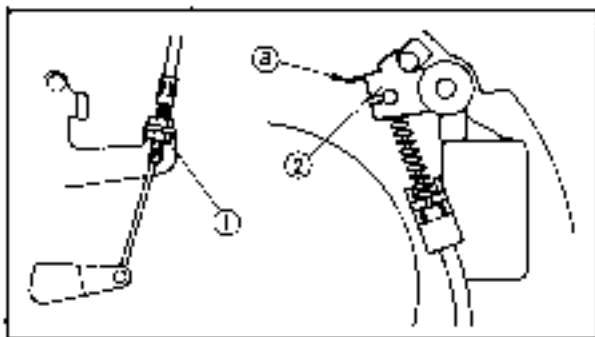

**Free play:**

1 mm (0.04 in)

- Tighten the lock nut (2).

### 3. Check:

- Throttle operation  
Rough operation → Repair.

### Start-in-gear protection adjustment

#### 1. Check:

- Start in-gear protection operation  
Incorrect → Adjust.

#### 2. Adjust:

- Start-in-gear protection wire

#### Adjustment steps:

- Set the shift lever in neutral.
- Loosen the lock nut (1)
- Adjust the start-in-gear protection wire adjuster so that the end of the stopper (2) aligns with the marking (3) of the starter case.
- Tighten the lock nut.

### Idle speed adjustment

#### NOTE:

Before adjusting the idle speed, be sure to adjust the throttle link.

#### 1. Measure:

- Idle speed  
Out of specification → Adjust

**Idle speed:**

750 ± 50 rpm

#### Measuring steps:

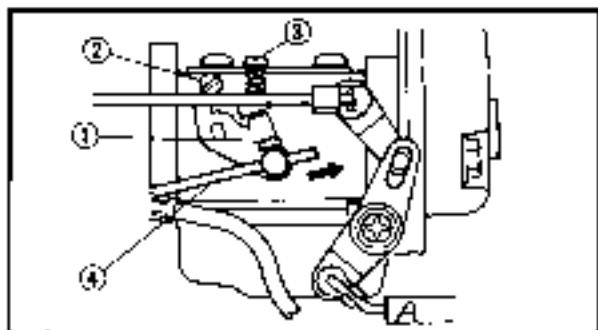

- Start the engine and allow it to warm up for a few minutes.
- Attach the tachometer to the high tension lead of the cylinder #1.

**Tachometer:**

YU-08036-A / 90890-06760

**INSP  
ADJ**

## CONTROL SYSTEM/LOWER UNIT

### 2. Adjust:

- Idle speed

#### Adjustment steps:

- Loosen the screw ① of the carburetor throttle lever.
- Turn in the pilot screw ② until it is lightly seated.
- Turn out the pilot screw to specification.

#### Pilot screw (turns out):

1-1/2 ± 1/4

- Adjust the throttle stop screw ③ in or out until specified idle speed is obtained.

**Turning in → Idle speed becomes higher.**

**Turning out → Idle speed becomes lower.**

- Pull the acceleration rod ④ until the fully retard screw contacts the fully retard stopper.
- Tighten the screw ①.

#### Screw:

1 Nm [0.1 m·kg, 0.7 ft·lb]

## LOWER UNIT

### Gear oil

#### 1. Check:

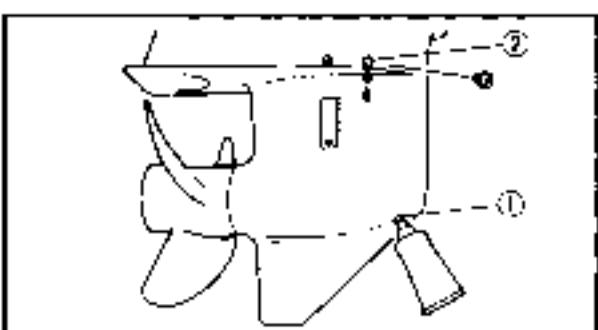

- Gear oil
- Milky oil → Replace the oil seal.  
Slag oil → Check the gear, bearing and dog.

#### 2. Check:

- Gear oil level
- Oil level is low → Add oil to proper level.

#### 3. Replace:

- Gear oil

#### Replacement steps:

- Tilt up the motor.
- Place a pan under the drain plug ①.
- Remove the drain plug, then the oil level plug ② and drain the oil thoroughly.
- Place the outboard motor in an upright position.

INSP  
ADJ

## LOWER UNIT/GENERAL

- Fill the gear oil through the drain hole until it overflows at the level hole.

### Recommended oil:

GEAR CASE LUBE (USA) or

Hypoid gear oil, SAE #90

### Oil capacity:

250 cm<sup>3</sup> (8.45 US oz, 8.80Imp oz)

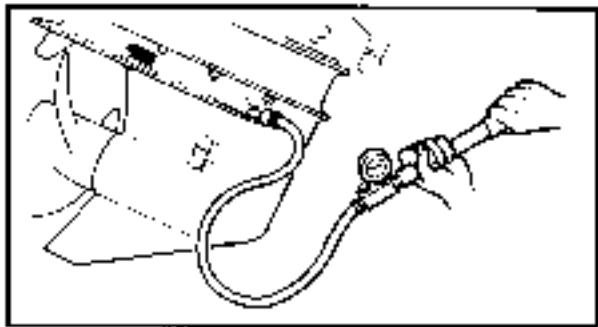

- Refit the oil level plug and then oil drain plug.

### Lower unit leakage check

#### 1. Check:

- Pressure holding

Pressure falls → Inspect seals and component parts.

#### Checking steps:

- Attach the tester to the oil-level hole.

#### Pressure tester:

YB-03595/90890-06762

- Apply the specified pressure.

#### Pressure:

100 kPa (1.0 kg/cm<sup>2</sup>, 14.2 psi)

- Check that the pressure is held as specified for 10 seconds.

#### NOTE:

Do not over-pressurize. Excess pressure may cause the air to leak out.

## GENERAL

### Anode

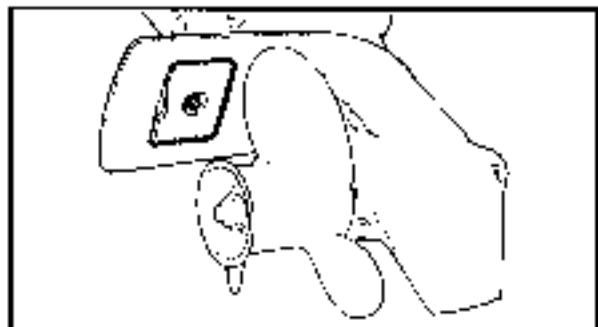

#### 1. Inspect:

- Anode

Scale → Clean.

Oil/grease → Clean.

Wear/Excessively consumed → Replace.

#### CAUTION:

Do not oil, grease or paint the anode, or the function of the sacrificial anode will be spoiled.

**Battery****⚠ WARNING**

**Battery electrolyte is poisonous and dangerous, causing severe burns, etc. It contains sulfuric acid. Avoid contact with skin, eyes, or clothing.**

**Antidote:**

**EXTERNAL:** Flush with water.

**INTERNAL:** Drink large quantities of water or milk. Follow with milk of magnesia, beaten egg, or vegetable oil. Call physician immediately.

**EYES:** Flush with water for 15 minutes and get prompt medical attention.

**Batteries produce explosive gases:** Keep sparks, flame, cigarettes, etc. away. Ventilate when charging or using in a closed space. Always wear eye protection when working near batteries.

**KEEP OUT OF REACH OF CHILDREN.**

---

**NOTE:**

- Batteries vary among manufacturers. Therefore the following procedures may not always apply. Consult your battery manufacturer's instructions
  - Disconnect the black negative lead first to prevent the risk of shorting.
- 

**1. Inspect:**

- Battery fluid level
- Battery fluid specific gravity

### Spark plug

#### 1. Inspect:

- Electrode ①  
Wear/Damage → Replace.
- Insulator color ②  
Distinctly different color → Check the engine condition.

#### Color guide

Medium to light tan color:  
**Normal**

Whitish color: Lean fuel mixture

Plugged fuel mixture

Air leak

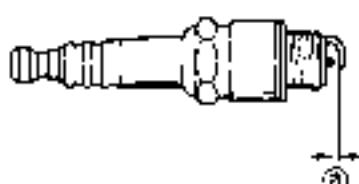

Wrong settings

Blackish color: Overly rich mixture

Electrical malfunction

Excess oil used

Defective spark plug

#### 2. Clean:

- Spark plug  
Clean the spark plug with a spark plug cleaner or wire brush.

#### 3. Measure:

- Spark plug gap ③  
Out of specification → Alter gap.  
Use a wire gauge.

#### Spark plug gap:

0.9 ~ 1.0 mm (0.035 ~ 0.039 in)

#### 4. Tighten:

- Spark plug

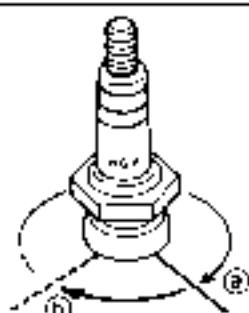

#### Spark plug:

25 Nm (2.5 m · kg, 18 ft · lb)

#### NOTE:

- Before installing a spark plug, clean the gasket surface and plug surface. Also it is suggested to apply a thin film of Anti Seize Compound to the spark plug threads to prevent future thread seizure.
- If a torque wrench is not available, a good estimate of the correct torque is a further 1/4 to 1/2 turns (b) on finger tightened (a) spark plug.

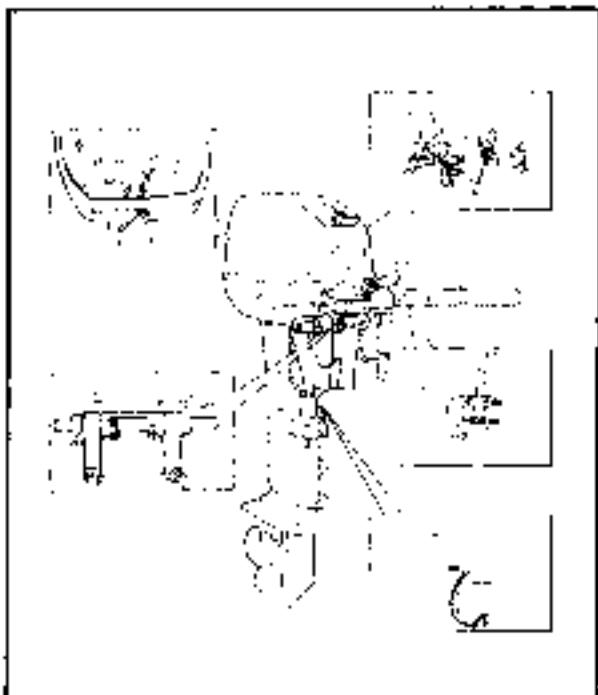

377.004

**INSP  
ADJ**

## GENERAL

### Greasing point

#### 1. Apply:

- Water resistant grease

INSP  
ADJ

---

Reverse the removal steps for installation.			

## SERVICE POINTS

### NOTE:

Do not use steel wire for cleaning the jets as this may enlarge the jet diameters and seriously affect performance.

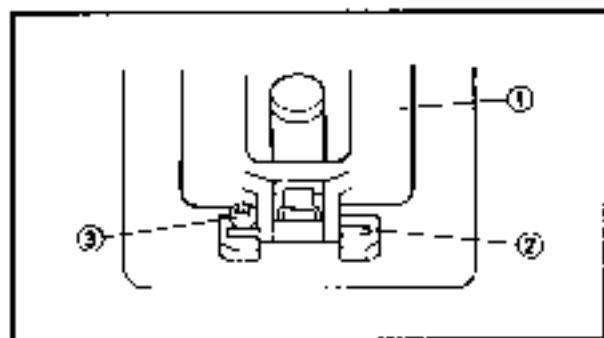

### Carburetor inspection

1. Inspect:
  - Carburetor body  
Crack/Damage → Replace.  
Contamination → Clean.
2. Inspect:
  - Pilot screw  
Bend/Wear → Replace.
3. Inspect:
  - Main jet
  - Pilot jet
  - Main nozzle  
Contamination → Replace.
4. Inspect:
  - Needle valve  
Grooved wear → Replace.
5. Inspect:
  - Float  
Crack/Damage → Replace.

### Fuel pump inspection

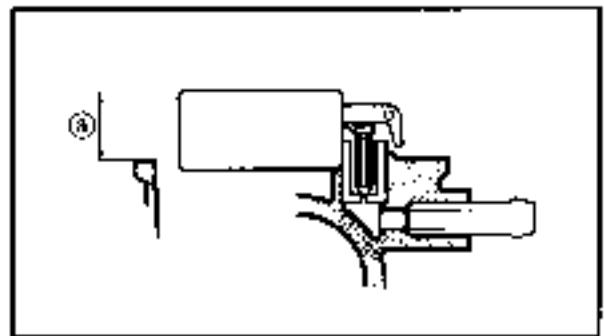

1. Inspect:
  - Body  
Crack/Leak/Damage → Replace.
2. Inspect:
  - Seat valve  
Crack/Distortion → Replace.
3. Inspect:
  - Diaphragm  
Damage → Replace.

**FUEL****CARBURETOR****Carburetor assembly**

1. Install:
  - Needle valve
  - Float ①
  - Float pin ②
  - Screw ③

**NOTE:**

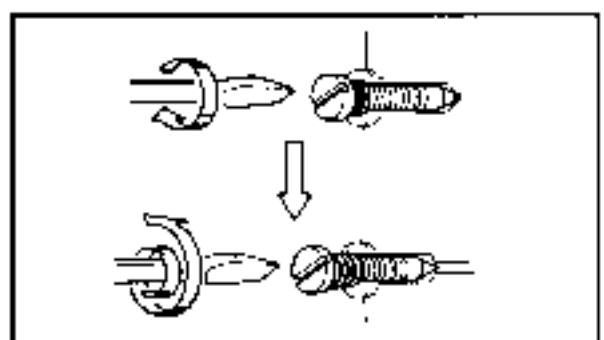

- The float pin should be fit in the slit the carburetor and locked with the screw.
- After installing, check the smooth movement of the float.

**2. Measure:**

- Float height ④:  
Out of specification → Replace.

**Float height ④:** $14.0 \pm 1.5 \text{ mm (} 0.55 \pm 0.06 \text{ in)}$ **NOTE:**

- The float should be resting on the needle valve, but not compressing the needle valve.
- Take measurement at the end surface of the float opposite to its pivoted side.

**3. Adjust:**

- Pilot screw

**Adjustment steps:**

- Screw in the pilot screw until it is lightly seated
- Back out by the specified number of turns.

**Pilot screw:** $1\frac{1}{2} \pm \frac{1}{4} \text{ (turns out)}$

**POWR****RECOIL STARTER**

## SERVICE POINTS

### Sheave drum removal

#### 1. Turn:

- Sheave drum ①

Turn the sheave drum clockwise until the spiral spring is free.

#### NOTE:

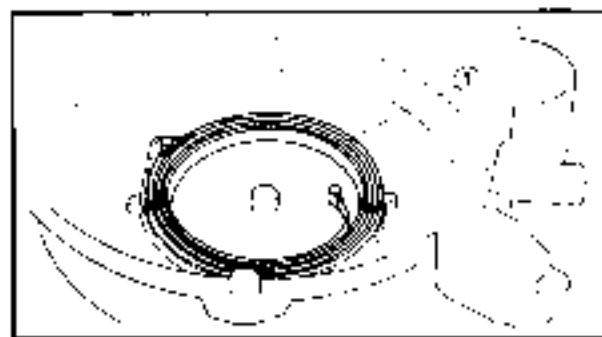

- Turn the sheave drum so that the cutaway on the outer surface of the sheave drum faces toward the starter handle.
- Pass the starter rope through the cut.

#### 2. Remove:

- Sheave drum

## **A**WARNING

When removing the sheave drum, be sure to turn the sheave drum upside down to prevent the spiral spring from popping up at you.

### Spiral spring removal

#### 1. Remove:

- Spiral spring ①

## **A**WARNING

Be careful so that the spiral spring does not pop out when removing it. Remove it by allowing it out one turn of the winding each time.

### Starter stopping plunger inspection

#### 1. Inspect:

- Starter stopping plunger  
Crack/Wear/Damage → Replace.

### Drive pawl and spring inspection

#### 1. Inspect:

- Drive pawl  
Crack/Wear/Damage → Replace.
- Drive pawl spring  
Broken/Bent/Damage → Replace.

### Bushing inspection

#### 1. Inspect:

- Bushing  
Crack/Damage → Replace.

**POWR****RECOIL STARTER****Sheave drum inspection**

1. Inspect:
  - Sheave drum  
Crack/Damage → Replace.

**Spiral spring inspection**

1. Inspect:
  - Spiral spring  
Broken/Bent/Damage → Replace.

**Starter rope inspection**

1. Inspect:
  - Starter rope  
Fray/Wear/Damage → Replace.

**NOTE:**

When replacing the rope, cut it to the specified length and burn the rope end so that it will not travel.

**Starter rope length:**

1,800 mm (70.9 in)

**Recoil starter checking**

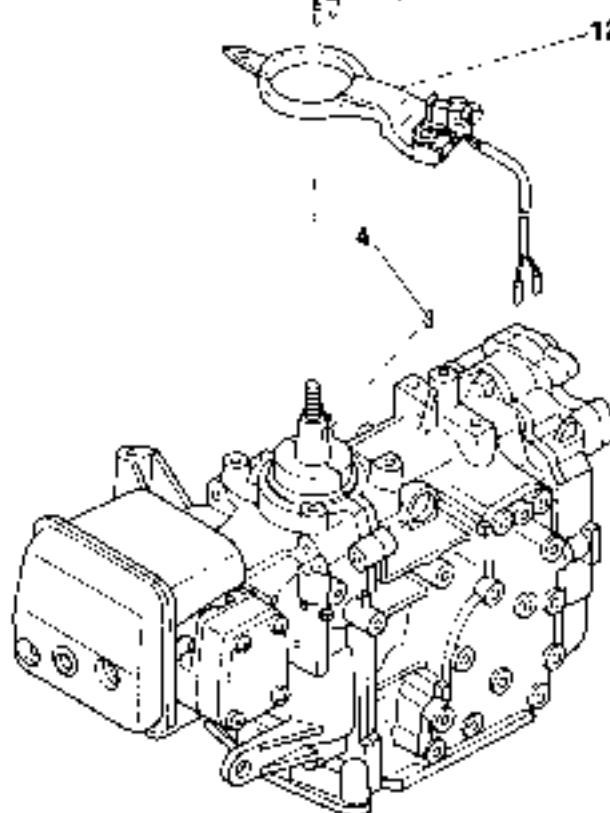

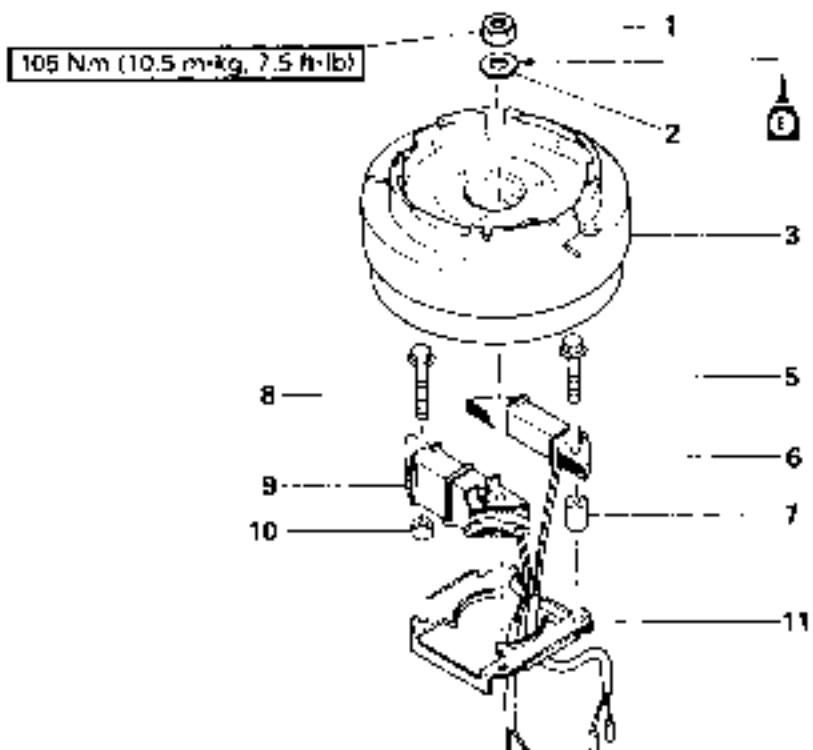

1. Check:
  - Starter operation  
Rough operation → Repair.

			Reverse the removal steps for installation.

## SERVICE POINTS

### Cylinder head inspection

1. Inspect:

- Water jacket  
Material deposit/Corrosion → Clean.
- Cylinder inner surface  
Score marks → Clean.  
Use #600 ~ 800 grit wet sandpaper.

### CAUTION: \_\_\_\_\_

Do not scratch the fitting surfaces of the cylinder and cylinder cover.

POWR

## CYLINDER HEAD, THERMOSTAT AND EXHAUST COVER

### 2. Measure:

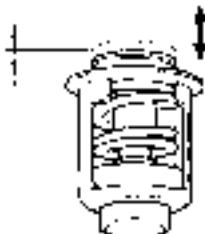

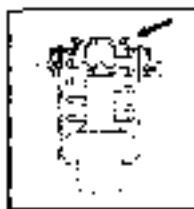

- Cylinder head warpage  
Use a straightedge and thickness gauge.  
Out of specification → Resurface or replace.

**Warpage limit:**  
0.1 mm (0.004 in)

### Resurfacing steps:

- Place a 400 – 600 grit wet sandpaper on the surface plate.
- Resurface the head using a figure-eight sanding pattern.

### Thermostat inspection

#### 1. Inspect:

- Thermostat  
Stick/Damage → Replace.

#### 2. Measure:

- Valve opening temperature
- Valve lift  
Out of specification → Replace.

Water temperature	Valve lift
Below 48 – 52 °C (118 – 126 °F)	0 mm (0 in)
Above 60 °C (140 °F)	Min. 3 mm (0.12 in)

### Measuring steps:

- Suspend thermostat in a vessel.
- Place reliable thermometer in a water.
- Heat water slowly.
- Observe thermometer, while stirring water continually.

	Reverse the removal steps for installation.		

**SERVICE POINTS****Cylinder body inspection**

## 1. Inspect:

- Water jacket  
Material deposit/Corrosion → Clean.
- Cylinder inner surface  
Score marks → Clean.  
Use #600 ~ 800 grit wet sandpaper.

**NOTE:**

Do not scratch the fitting surfaces of the crank case and cylinder head.

## 2. Inspect:

- Exhaust wall  
Crack/Damage → Replace.  
Carbon deposit → Clean.  
Use a round scraper

**NOTE:**

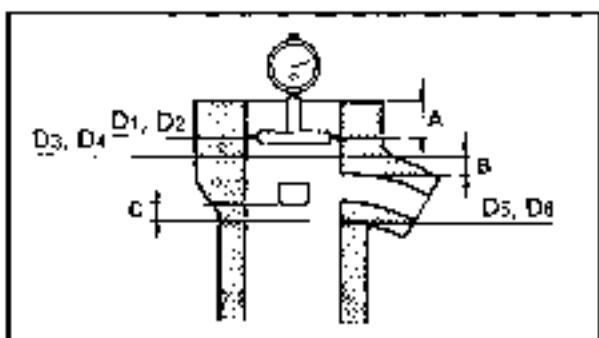

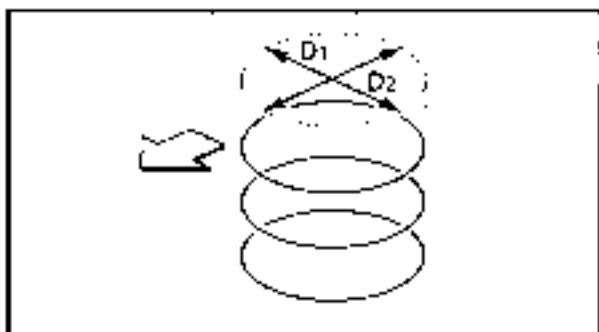

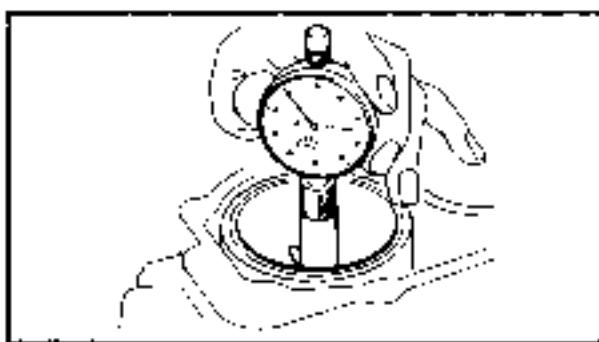

Do not scratch the fitting surfaces of the cylinder and exhaust cover.

## 3. Measure:

- Cylinder bore "D"  
Use cylinder gauge  
Out of specification → Rebore or replace.

**NOTE:**

Measure the cylinder bore "D" in parallel. Then, find the average of the measurement.

	Standard	Wear limit
Cylinder bore "D"	56.00 ~ 56.02 mm (2.205 ~ 2.208 in)	56.1 mm (2.21 in)
Taper limit T:	—	0.08 mm (0.003 in)
Out of round limit	—	0.05 mm (0.002 in)
D =	Maximum Dia. (D1 – D6)	
T =	(maximum D1 or D2) – (minimum D5 or D6)	

A: 10 mm (0.4 in) below the cylinder top

B: 5 mm (0.2 in) above the exhaust port

C: 5 mm (0.2 in) below the scavenging port

POWR

## CRANKCASE AND CYLINDER BODY

## Piston to cylinder clearance

## 1. Calculate:

- Piston clearance

Out of specification → Replace piston and piston ring and/or cylinder.

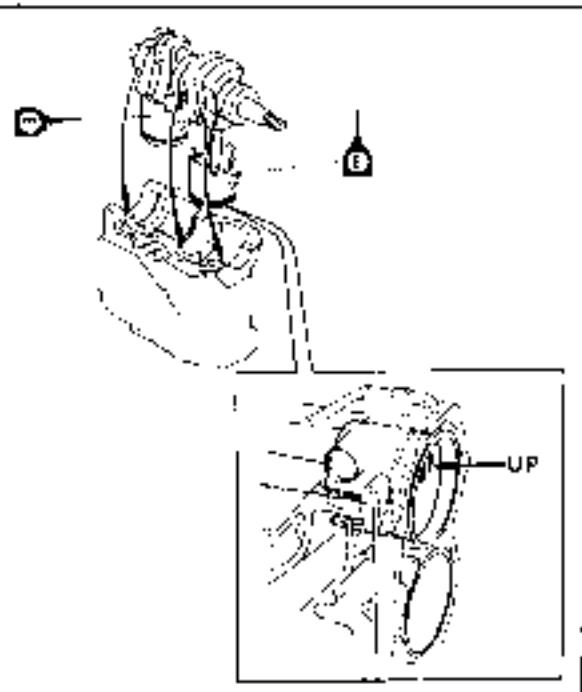

$$\text{Piston clearance} = \text{Cylinder bore} - \text{Piston diameter}$$

## Piston clearance:

0.035 ~ 0.040 mm

{0.0014 ~ 0.0016 in}

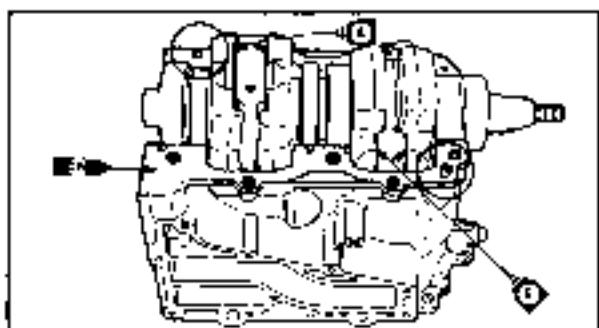

## Cylinder body and crankcase installation

## 1. Install:

- Cylinder body
- Crankshaft and piston

## NOTE: \_\_\_\_\_

- Align the piston ring end gaps with the respective locating pins.
- Fit the bearing locating pins in the cylinder body

## 2. Apply:

- Gasket maker

Onto the connecting surfaces of the crankcase and cylinder body.

## NOTE: \_\_\_\_\_

- Clean the connecting surfaces of the crankcase and cylinder body before applying the Gasket maker.
- Gasket maker should be so applied that it does not overflow the contacting surface.

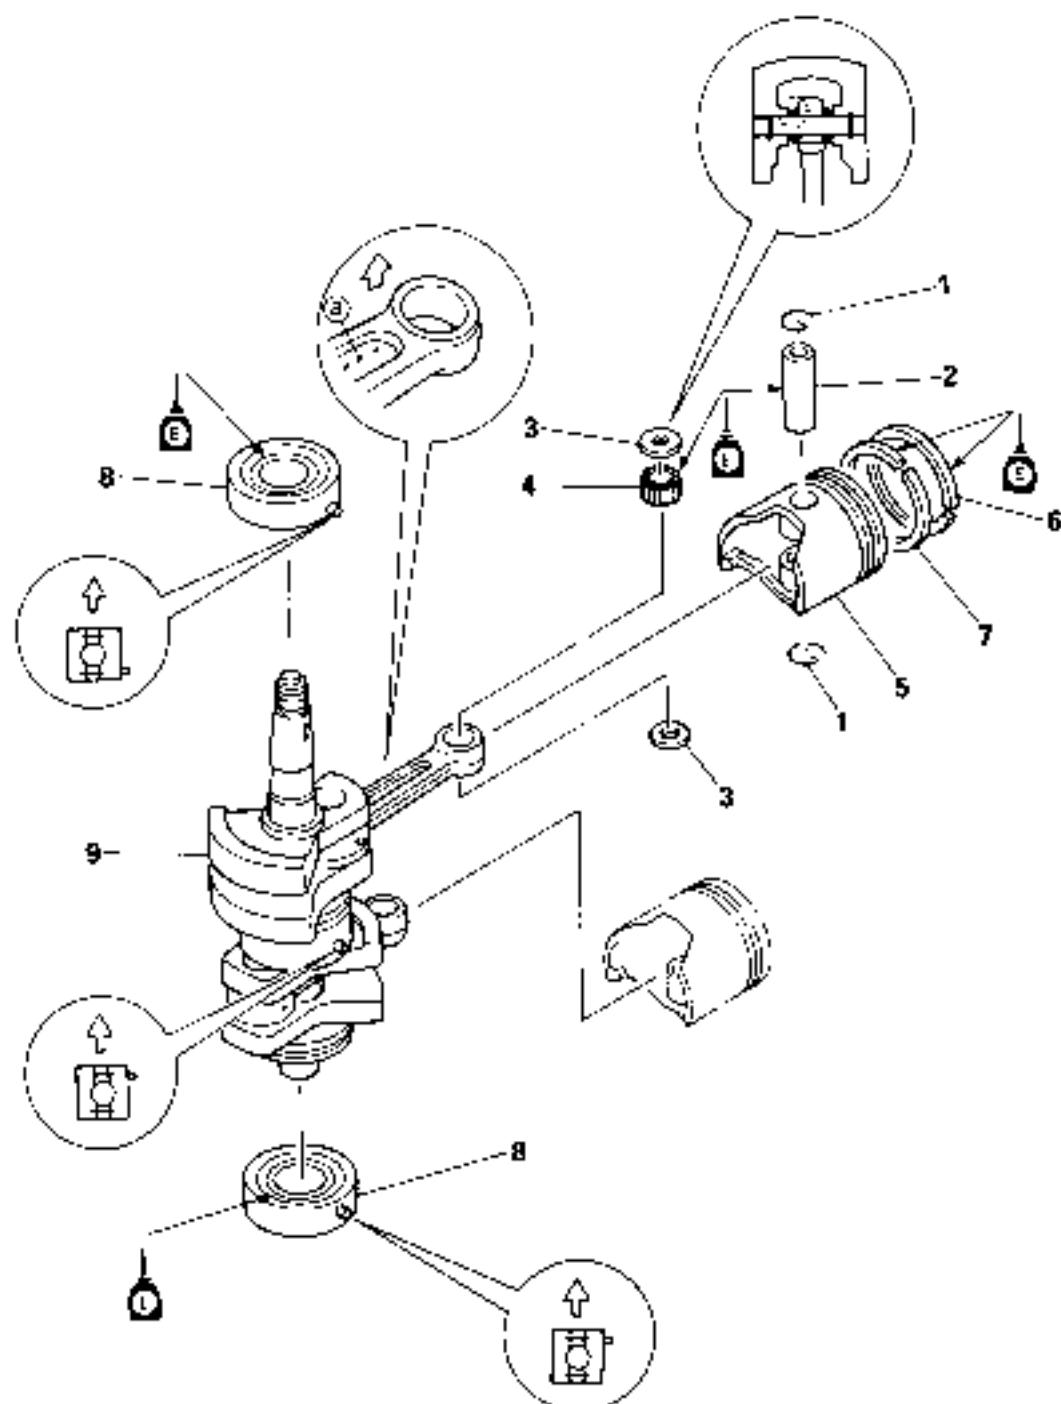

POWR

## CRANK SHAFT AND PISTON

### CRANK SHAFT AND PISTON

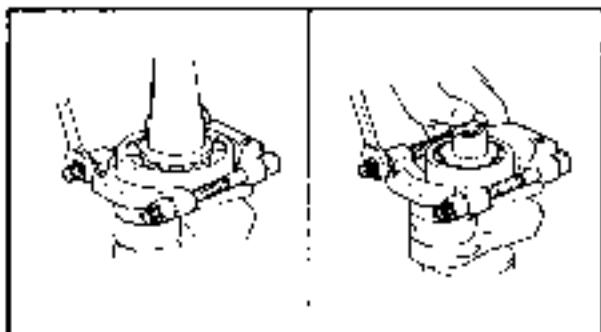

#### EXPLODED DIAGRAM

## REMOVAL AND INSTALLATION CHART

Step	Procedure/Part name	O'ty	Service points
	<b>CRANK SHAFT AND PISTON DISASSEMBLY</b>		Follow the left "Step" for removal.
	Crank shaft assembly		Refer to the "CRANKCASE AND CYLINDER BODY" section.
1	Piston pin clip	4	<b>NOTE:</b> _____ Take care not to damage piston pin hole edge.  <b>CAUTION:</b> _____ Always use the new clip.
2	Piston pin	2	<b>NOTE:</b> _____ When the piston pins, pistons, and small end needle bearings are reused, they should be marked with No. 1 and 2 so that they are not confused.
3	Piston pin washer	4	<b>CAUTION:</b> _____ The washer should be placed with their convex sides facing the piston.
4	Small end bearing needle	50	<b>CAUTION:</b> _____ Do not a mixture of new and used bearing needles in the same small end.
5	Piston	2	<b>NOTE:</b> _____ Mold mark  faces in the same direction as the "UP" mark on the piston.
6	Top piston ring	2	<b>NOTE:</b> _____
7	2nd piston ring	2	Remove the piston ring from the piston by opening the ring to the least possible width.
8	Bearing	2	
9	Crank shaft	1	
			Reverse the removal steps for installation.

## SERVICE POINTS

### Bearing removal

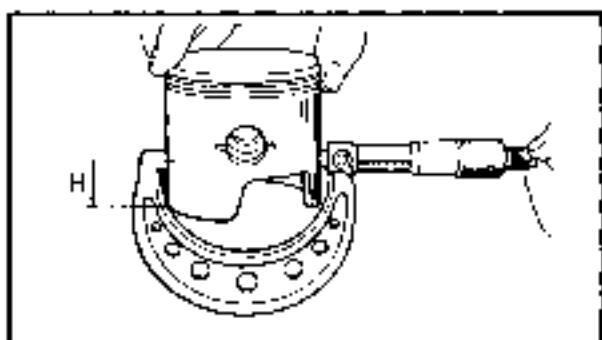

1. Remove:
  - Bearing

### NOTE:

Hold the bearing with the bearing separator, and forth out the crankshaft with a press.

**Bearing separator:**

YB-06219/90890-06534

### Piston inspection

1. Measure:
    - Piston diameter
- Use a micrometer.  
Out of specification → Replace.

	Measuring point "H"	Piston diameter
Standard	10 mm (0.4 in)	55.940 ~ 55.985 mm 1.2.2024 ~ 1.2.2041 in

	Over size piston diameter:
1:	56.25 mm (2.215 in)
2:	56.50 mm (2.224 in)

\*: Except for U.S.A.

2. Measure:
    - Piston pin boss inside diameter
- Use a micrometer.  
Out of specification → Replace.

	Piston pin boss inside diameter:
	14.004 ~ 14.015 mm (0.5513 ~ 0.5518 in)

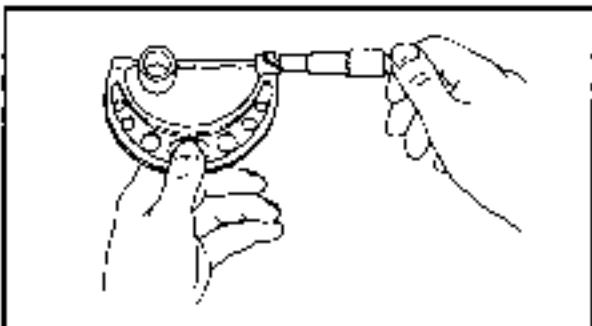

### Piston pin end small end bearing inspection

1. Inspect:
    - Piston pin
    - Small end bearing
- Signs of heat discoloration → Replace  
Scratch/Damage → Replace.

POWR

## CRANK SHAFT AND PISTON

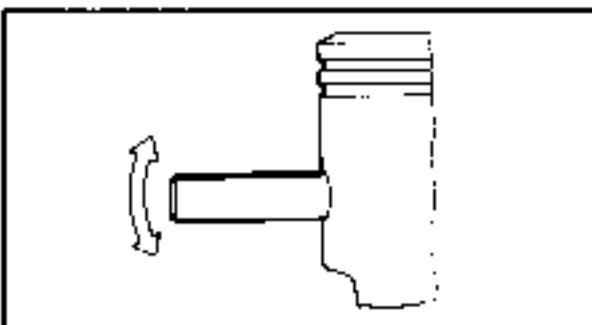

## 2. Measure:

- Piston pin diameter  
Use a micrometer.  
Out of specification → Replace.

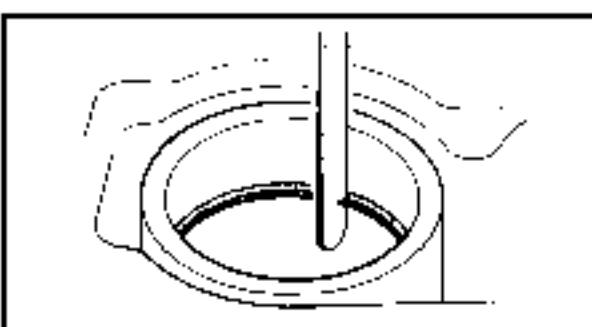

## Piston pin diameter:

13.996 ~ 14.000 mm  
(0.5510 ~ 0.5512 in)

## 3. Check:

- Free play (when the piston pin is inserted in the piston.)  
There should be no noticeable free play.  
Free play exists → Replace the pin and/or piston.

## Piston ring inspection

## 1. Inspect:

- Piston ring  
Breakage/Damage → Replace.

## 2. Measure:

- End gap  
Use a feeler gauge.  
Out of specification → Replace.

## End gap:

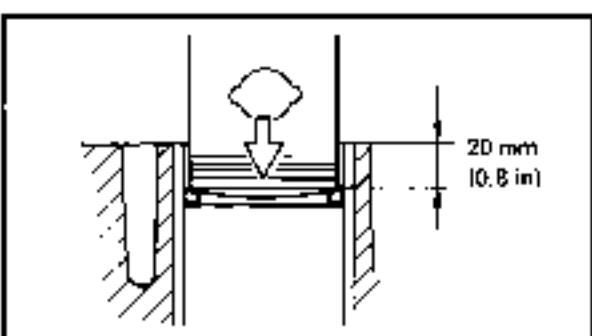

Top: 0.15 ~ 0.35 mm  
(0.006 ~ 0.014 in)  
2nd: 0.15 ~ 0.35 mm  
(0.006 ~ 0.014 in)

## End gap limit:

Top: 0.55 mm (0.022 in)  
2nd: 0.55 mm (0.022 in)

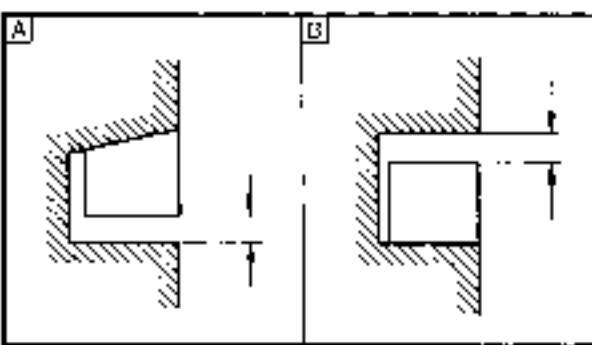

## Measuring point

20 mm (0.8 in)

## NOTE:

Install the piston ring into the cylinder. Push the ring with the piston crown.

## 3. Measure:

- Side clearance  
Use a thickness gauge.  
Out of specification → Replace piston and/or ring.

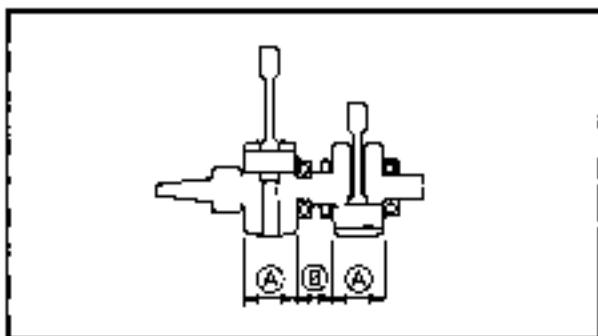

## Side clearance:

Top [A]: 0.02 ~ 0.06 mm  
(0.001 ~ 0.002 in)  
2nd [B]: 0.04 ~ 0.08 mm  
(0.002 ~ 0.003 in)

**POWR**

## CRANK SHAFT AND PISTON

### Crankshaft inspection

#### 1. Measure:

- Crank width **A**
- Crank width **B**

Out of specification → Replace.

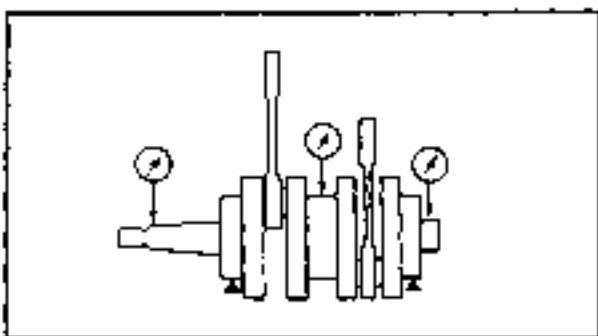

**Crank width **A**:**

46.90 ~ 46.95 mm (1.846 ~ 1.848 in)

**Crank width **B**:**

25.80 ~ 26.10 mm (1.020 ~ 1.028 in)

#### 2. Measure:

- Runout

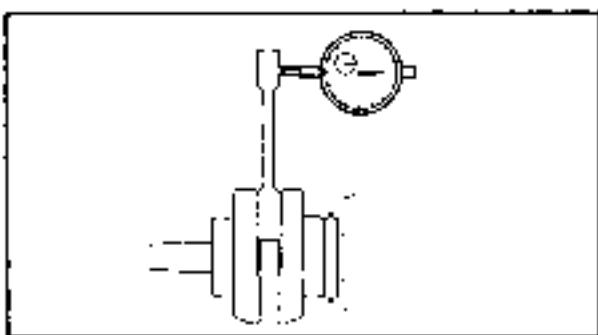

Use a V-blocks and dial gauge.

Out of specification → Replace.

**Runout limit:**

0.03 mm (0.001 in)

#### 3. Measure:

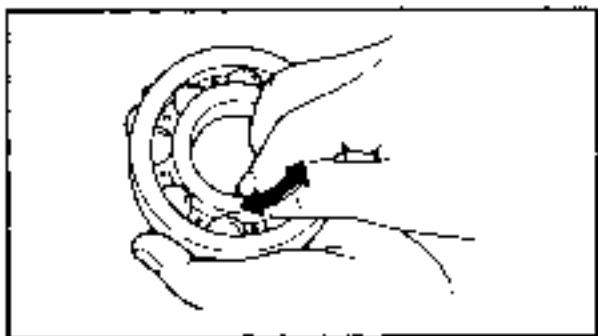

- Axial play

Out of specification → Replace.

**Axial play limit:**

2.0 mm (0.08 in)

#### 4. Inspect:

- Crankshaft bearing

Pitting/Rumbling → Replace.

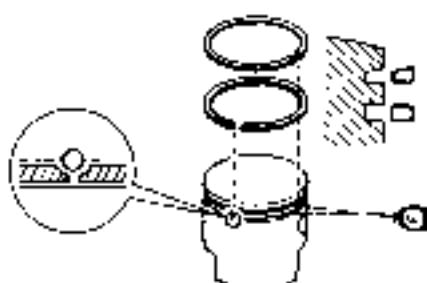

### CAUTION:

- Do not spin bearing with air blow; this can damage the bearing.
- Also take care not to scratch the bearing balls when cleaning.

POWR

## CRANK SHAFT AND PISTON

### Piston and piston ring installation

#### 1. Install:

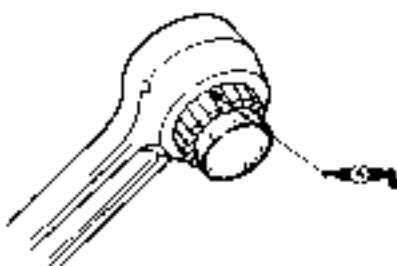

- Piston ring (2nd)
- Piston ring (top)

### CAUTION:

- Take care not to scratch the piston or break piston rings.
- Align the each ring end gap with their locating pins.
- After fitting the rings, check that they move smoothly.

### NOTE:

Piston rings should be replaced as a set.

### Crankshaft and piston installation

#### 1. Install:

- Small end bearing needle

Needles per piston:  
25 pieces

Small end bearing needle installer:  
YB-06104/90890-06543

## DRIVE SHAFT, FORWARD GEAR AND SHIFT ROD

### SERVICE POINTS

#### Pinion nut removal and installation

1. Remove and install:

- Pinion nut

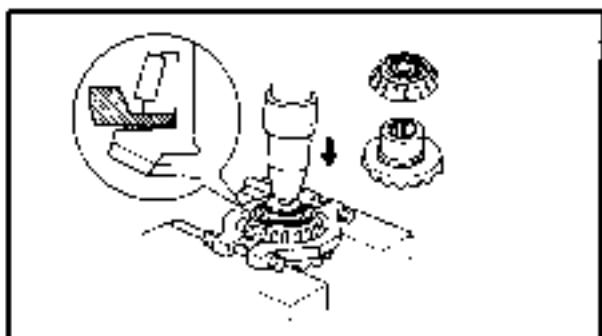

**Drive shaft holder:**

**YB-06228/90890-06516**

**Pinion nut holder:**

**YB-06078**

### Forward gear disassembly

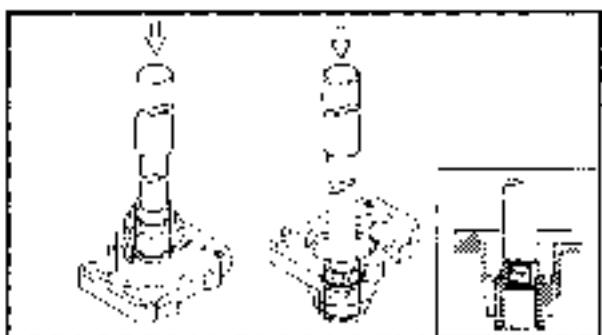

1. Remove:

- Taper roller bearing
- Forward gear

**Bearing separator:**

**YB-06219/90890-06534**

### Bearing housing disassembly and assembly

1. Remove and install:

- Bushing

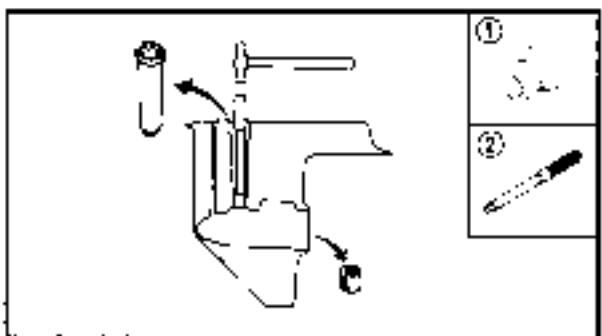

**Bushing attachment:**

**YB-06028/90890-06649**

**Driver rod:**

**YB-06229/90890-06652**

1. Remove:

- Drive shaft needle bearing

**Needle bearing attachment:**

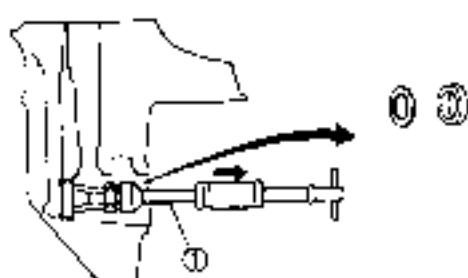

**YB-06230/90890-06617 ..... ①**

**Driver rod:**

**YB-06229/90890-06602 ..... ②**

**LOWR**

## DRIVE SHAFT, FORWARD GEAR AND SHIFT ROD

### Pinion and forward gear inspection

#### 1. Inspect:

- Tooth
- Dog

Wear/Damage → Replace.

### Drive shaft inspection

#### 1. Inspect:

- Drive shaft

Wear/Damage → Replace.

### Shift cam inspection

#### 1. Inspect:

- Shift cam

Wear/Damage → Replace.

### Bearing inspection

#### 1. Inspect:

- Bearing

Pitting/Rumbling → Replace.

### Sleeve inspection

#### 1. Inspect:

- Sleeve

Wear/Damage → Replace.

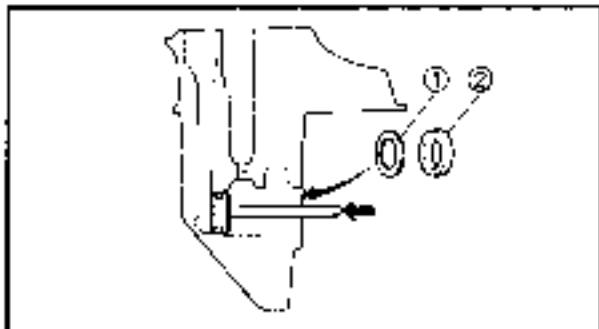

LOWR

## DRIVE SHAFT, FORWARD GEAR AND SHIFT ROD

## Lower case inspection

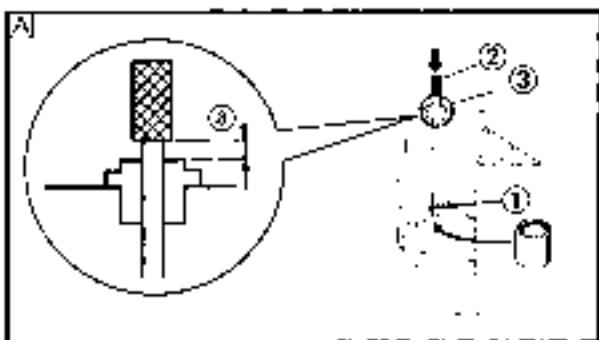

1. Clean:
  - Gear case  
Use a soft brush and solvent.
2. Inspect:
  - Water passage  
Mineral deposits/Corrosion → Clean.
3. Inspect:
  - Lower case  
Crack/Damage → Replace.

## Lower case assembly

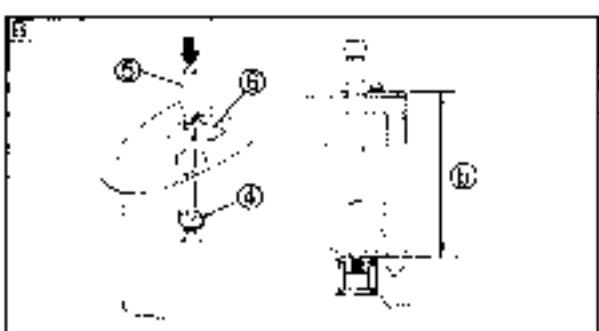

1. Install:
  - Forward gear shim ①
  - Forward gear bearing outer race ②

	<b>Bearing installer:</b> YB-06085/90890-06625
	<b>Driver rod:</b> YB-06071/90890-06605

2. Install:
  - Drive shaft needle bearing

	<b>Depth ③:</b> 17.8 mm (0.70 in)
	<b>Depth ④:</b> 172.7~173.2 mm (6.80~6.82 in)

	<b>Bearing attachment:</b> YB-06230.....① 90890-06617.....④
	<b>Driver rod:</b> YB-06229.....② 90890-06602.....⑤
	<b>Driveshaft needle bearing depth stop:</b> YB-06231.....③
	<b>Bearing depth plate:</b> 90890-06603.....⑥

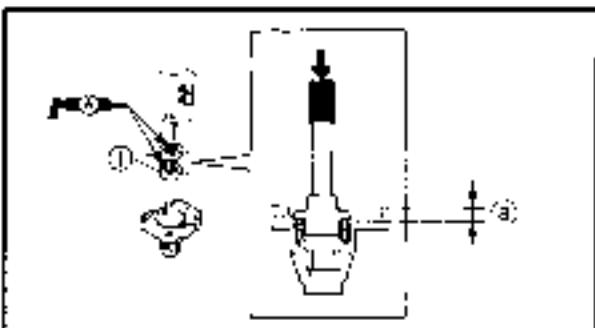

A For USA and CANADA

B Except for USA and CANADA

LOWR

## DRIVE SHAFT, FORWARD GEAR AND SHIFT ROD

### Drive shaft oil seal housing assembly

#### 1. Install:

- Oil seal (1)

Depth (2):

7.0 ~ 8.0 mm (0.28 ~ 0.31 in)

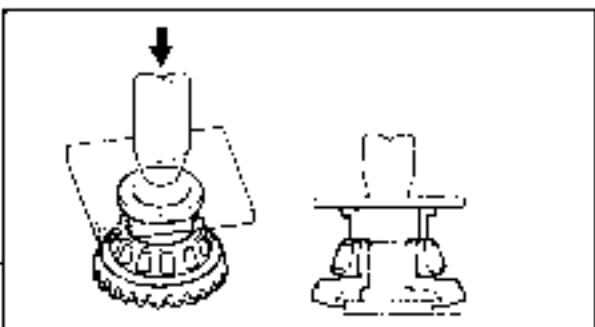

Bearing Installer:

YB-06022

Driver rod:

YB-06071

### Forward gear assembly

#### 1. Install:

- Forward gear
- Taper roller bearing

Bearing installer:

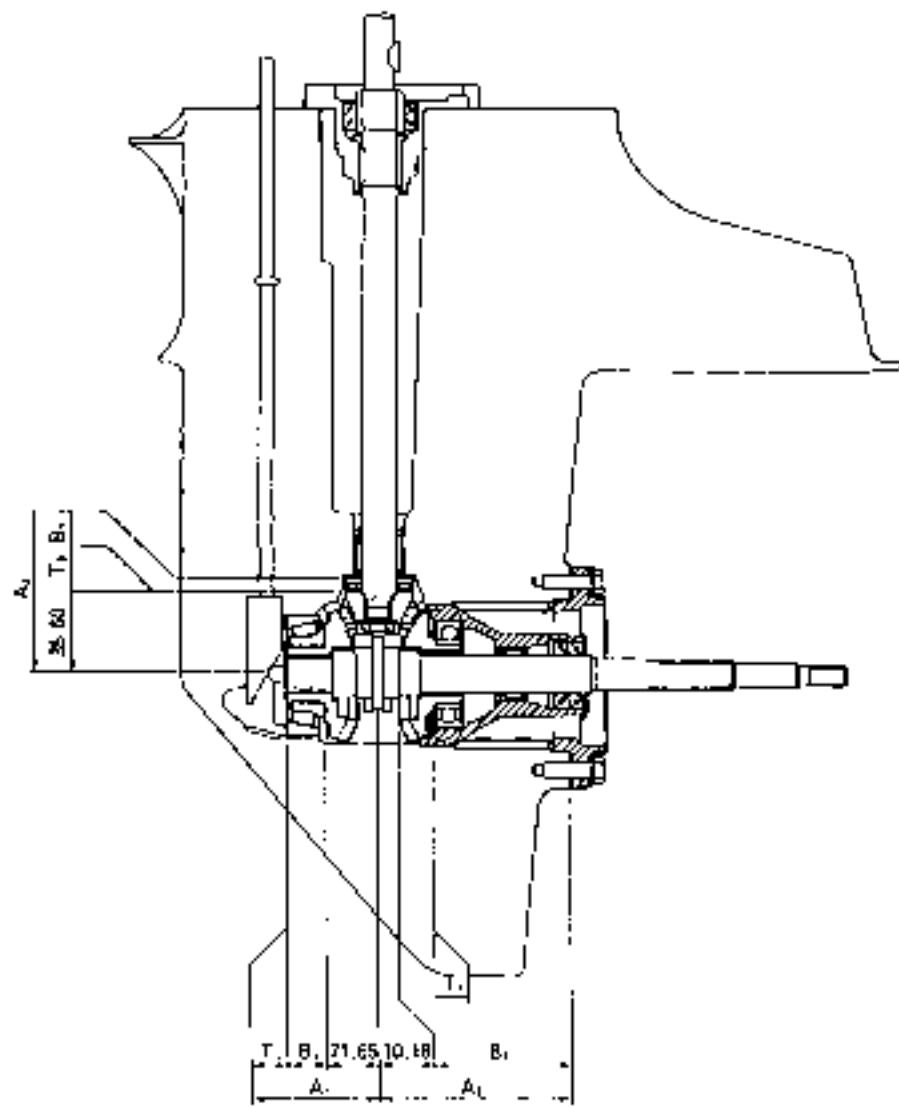

90890-06644

LOWR

SHIMMING

**SHIMMING  
EXPLODED DIAGRAM**

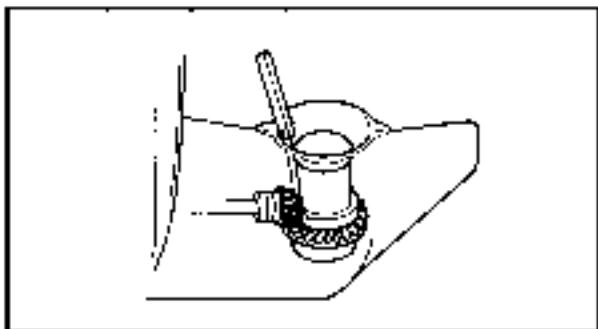

**LOWR**

## SHIMMING

**NOTE:**

Shim selection requirement guide:

- Not required when;  
reassembling with original case and inner parts.
- Numeric calculation is required when;  
reassembling with original inner parts and  
the new case. (Difference between original  
and new case)
- Measurement and adjustment is required  
when;  
replacing the inner part(s).

### SHIM SELECTION (FOR USA AND CANADA)

#### Pinion gear shim

##### 1. Measure:

- Pinion gear clearance  
Out of specification → Adjust.

**Clearance:**

1.15 ~ 1.25 mm

**Measuring steps:**

- Install the drive shaft components and tighten the pinion nut.

**Pinion nut:**

26 Nm (2.6 m · kg, 19 ft · lb)

- Attach the shimming tool into the gear case.

**Pinion height gauge:**

YB-34232

- Measure the clearance and determine the shim thickness.

Less than 1.15 mm	To be decreased by (1.20 - measurement)
More than 1.25 mm	To be increased by (measurement - 1.20)

LOWR

## SHIMMING

Example:

If measurement = 1.02 mm

decrease shim thickness by

$$= 1.20 - 1.02$$

= 0.18 mm

If measurement = 1.32 mm

increase shim thickness by

$$= 1.32 - 1.20$$

= 0.12 mm

Available shim thickness:

1.13 and 1.20 mm

NOTE:

Find forward and reverse gear shim thickness  
by backlash measurement.

LOWR

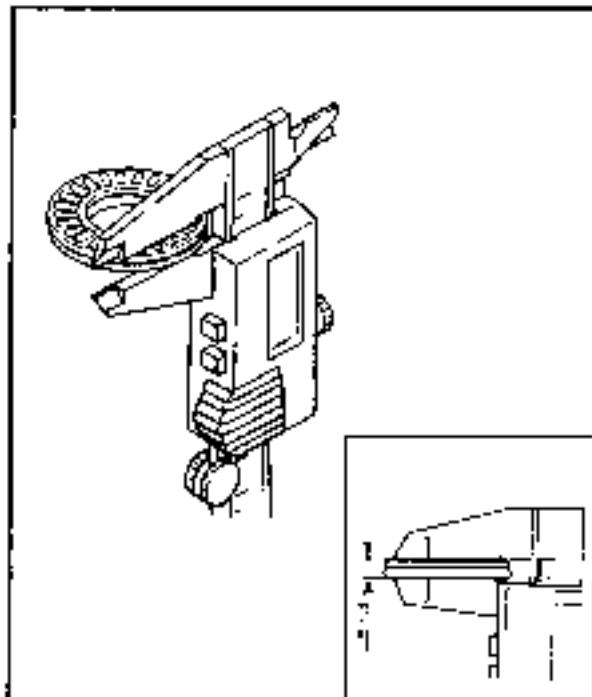

SHIMMING

## SHIM SELECTION (EXCEPT FOR USA AND CANADA)

### Pinion gear shim

#### NOTE:

Find pinion gear shim thickness (T3) by selecting shims until the specified measurement is obtained with the special tool.

#### 1. Measure:

- Measurement (M)

Digital caliper:  
90890-06704

#### NOTE:

Measure the thicknesses (Mv3) of bearing and washer.

#### 2. Calculate:

- Pinion gear shim thickness (T3)

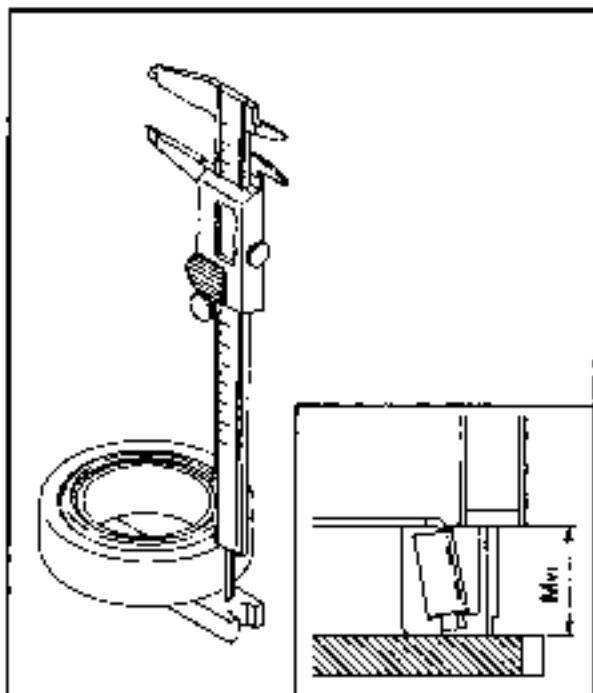

Pinion gear shim thickness  
(T3) = 6.05 - Mv3 mm

#### 3. Select:

- Pinion gear shim

Calculated numeral		Using shim
more than	or less	
1.13	1.20	1.13
1.20	1.30	1.20
		Available shim thickness: 1.13 and 1.20 mm

**LOWR****SHIMMING****Forward gear shim****NOTE:**

Find forward gear shim thickness (T1) by selecting shims until the specified measurement (M) is obtained with the special tool.

**1. Measure:**

- Measurement (M)

**Shimming plate:**

90890-06701

**Digital caliper:**

90890-06704

**NOTE:**

Measure the length between the shimming plate and the bearing outer race after turning the outer race 2 to 3 times.

**2. Calculate:**

- Forward gear shim thickness (T1)

**Forward gear shim thickness  
(T1) = 16.60 · Mv1**

**3. Select:**

- Forward gear shim

<b>Calculated numeral</b>		<b>Rounded numeral</b>
<b>at 1/100th place</b>		
<b>more than</b>	<b>or less</b>	
0.00	0.02	0.00
0.02	0.05	0.02
0.05	0.08	0.05
0.08	0.10	0.08

**Available shim thickness:**

0.10, 0.12, 0.15, 0.18, 0.30, 0.40  
and 0.50 mm

**Example:**

If T1 is "0.44 mm",

then forward gear shim = 0.42 mm

If T1 is "0.45 mm",

then forward gear shim = 0.45 mm

**LOWR****SHIMMING****Reverse gear shim****NOTE:**

Find reverse gear shim thickness (T2) by selecting shims until the specified measurement (M) is obtained with the special tool.

**1. Measure:**

- Measurement (M)

**Shimming plate:**

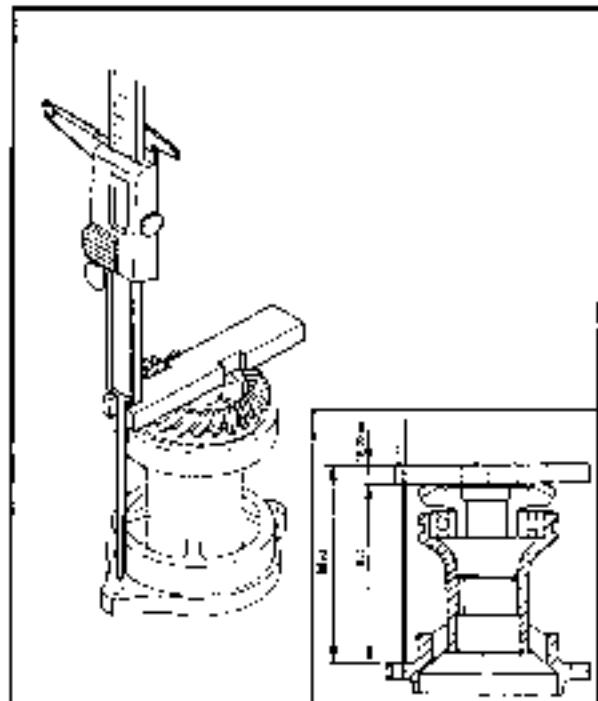

90890-06701

**Digital caliper:**

90890-06704

**NOTE:**

Remove the shim(s) before measurement.

**2. Calculate:**

- Reverse gear shim thickness (T2)

**Reverse gear shim thickness  
(T2) = 80.57 - M<sub>v2</sub>****3. Select:**

- Reverse gear shim

<b>Calculated numeral</b>		<b>Using shim</b>
<b>more than</b>	<b>or less</b>	
0.30	0.40	0.30
0.40	0.50	0.40
0.50	0.60	0.50
0.60	0.70	0.60

**Available shim thickness:**

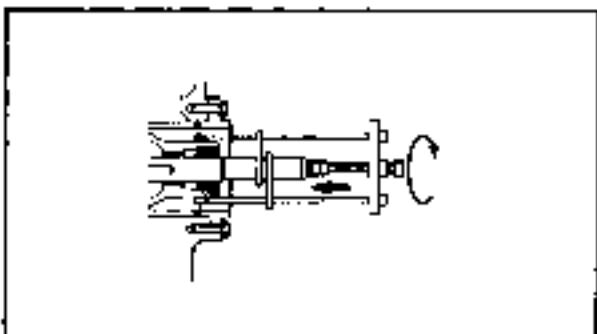

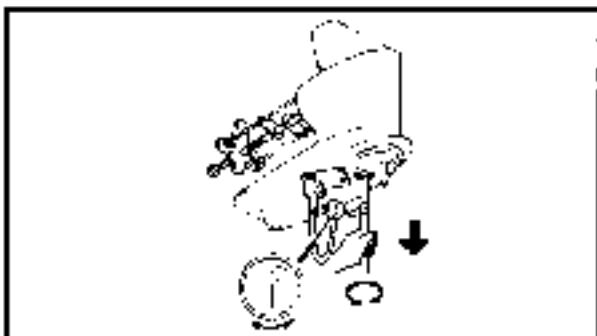

0.10, 0.20, 0.30, 0.40 and 0.50 mm

## BACKLASH MEASUREMENT

### NOTE:

- Do not install the water pump components when measuring the backlash.
- Both forward and reverse gear backlashes should be measured.
- If both the forward and reverse gear backlashes are large than specified, the pinion may be too high.
- If both forward and reverse gear backlashes are smaller than specified, the pinion may be too low.
- If either of these conditions exists, then check the pinion shim selection.

### Forward gear

#### 1. Measure:

- Forward gear backlash  
Out of specification → Adjust.

#### Backlash:

0.19 ~ 0.86 mm (0.007 ~ 0.034 in)

#### Measuring steps:

- Set the shift shaft in the forward position.
- Set the bearing housing puller for pushing the propeller shaft.

#### Bearing housing puller:

YB-06234/90890-06503

#### Universal puller:

YB-06117

#### Stopper guide plate:

90890-06501

#### Center bolt:

90890-06504

#### Center bolt:

5 Nm (0.5 m · kg, 3.6 ft · lb)

- Set the lower unit upside down.
- Attach the backlash indicator on the drive shaft (12.8 mm in diameter).

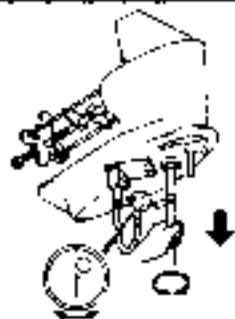

#### Backlash indicator:

YB-06265/90890-06706

LOWR

## SHIMMING

- Attach the dial gauge on the lower case, and make the dial gauge stem contact the mark on the indicator.

**Backlash adjusting plate:**

VB-07003

**Dial gauge:**

YU-03097/90890-01252

**Magnet base:**

YU-34481/90890-06705

- While pulling the drive shaft, slowly turn the drive shaft clockwise and counterclockwise; then, measure the backlash when the drive shaft stops in each direction.

## 2. Adjust:

- Forward gear shim(s)

**NOTE:**

Adjust the shim(s) to be added or removed according to specification.

	Forward gear backlash	Shim thickness
Less than 0.19 mm	To be decreased by <u>(0.53 - measurement)</u>	2.1
More than 0.86 mm	To be increased by <u>(measurement - 0.53)</u>	2.1
<b>Available shim thickness:</b>		
0.10, 0.12, 0.15, 0.18, 0.30, 0.40 and 0.50 mm		

**Reverse gear**

## 1. Measure:

- Reverse gear backlash

Out of specification → Adjust.

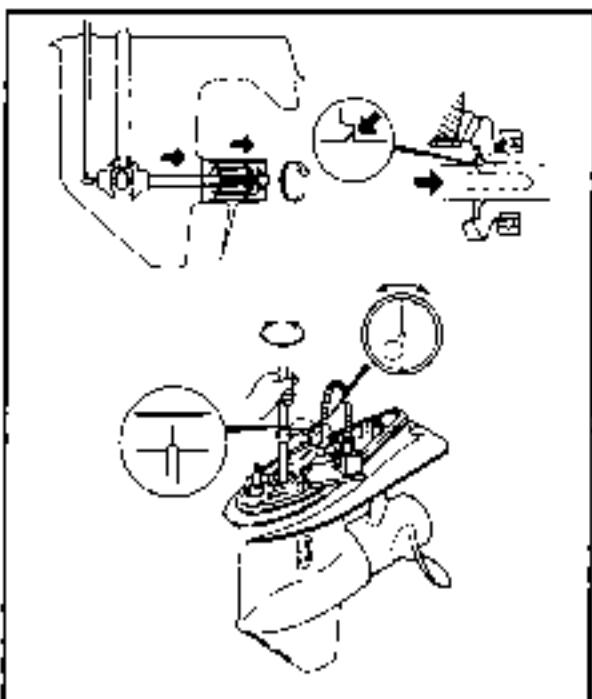

**Backlash:**

0.95 ~ 1.65 mm [0.037 ~ 0.065 in.]

LOWR

SHIMMING

**Measuring steps:**

- Set the shift shaft in the reverse position.
- Load the reverse gear by installing the propeller with the front side facing backward, and tighten the propeller nut.

**Propeller nut:**

5 Nm (0.5 m · kg, 3.6 ft · lb)

- Attach the backlash indicator on the drive shaft (12.8 mm in diameter).

**Backlash indicator:**

YB-06265/90890-06706

- Attach the dial gauge on the lower case, and make the dial gauge stem contact the mark on the indicator.

**Backlash adjusting plate:**

YB-07003

**Dial gauge:**

YU-03097/90890-01252

**Magnet base:**

YU-34481/90890-06705

- While pulling the drive shaft, slowly turn the drive shaft clockwise and counterclockwise; then, measure the backlash when the drive shaft stops at each direction.

## 2. Adjust:

- Reverse gear shim(s)

**NOTE:**

Adjust the shim(s) to be added or removed according to specification.

<b>Reverse gear backlash</b>	<b>Shim thickness</b>
------------------------------	-----------------------

Less than 0.95 mm	To be decreased by [1.30 - measurement]
-------------------	--

2.1

More than 1.65 mm	To be increased by [measurement - 1.30]
-------------------	--

2.1

**Available shim thickness:**

0.10, 0.20, 0.30, 0.40 and 0.50 mm

## ELECTRICAL ANALYSIS

### ELECTRICAL ANALYSIS INSPECTION

All measuring instruments should be handled with special care, or the correct measurement is impossible.

On an instrument powered by dry batteries, they should be checked for voltage periodically and replaced, if necessary.

#### NOTE:

" indicates the terminals between which there is a continuity of electricity; i.e., a closed circuit at the respective switch position.

#### Peak voltage measurement

#### NOTE:

- The coil output varies greatly cranking speed.
- Cranking the cold engine with the plugs in and a weak battery cannot be found proper readings.

Digital tester:

J-39299

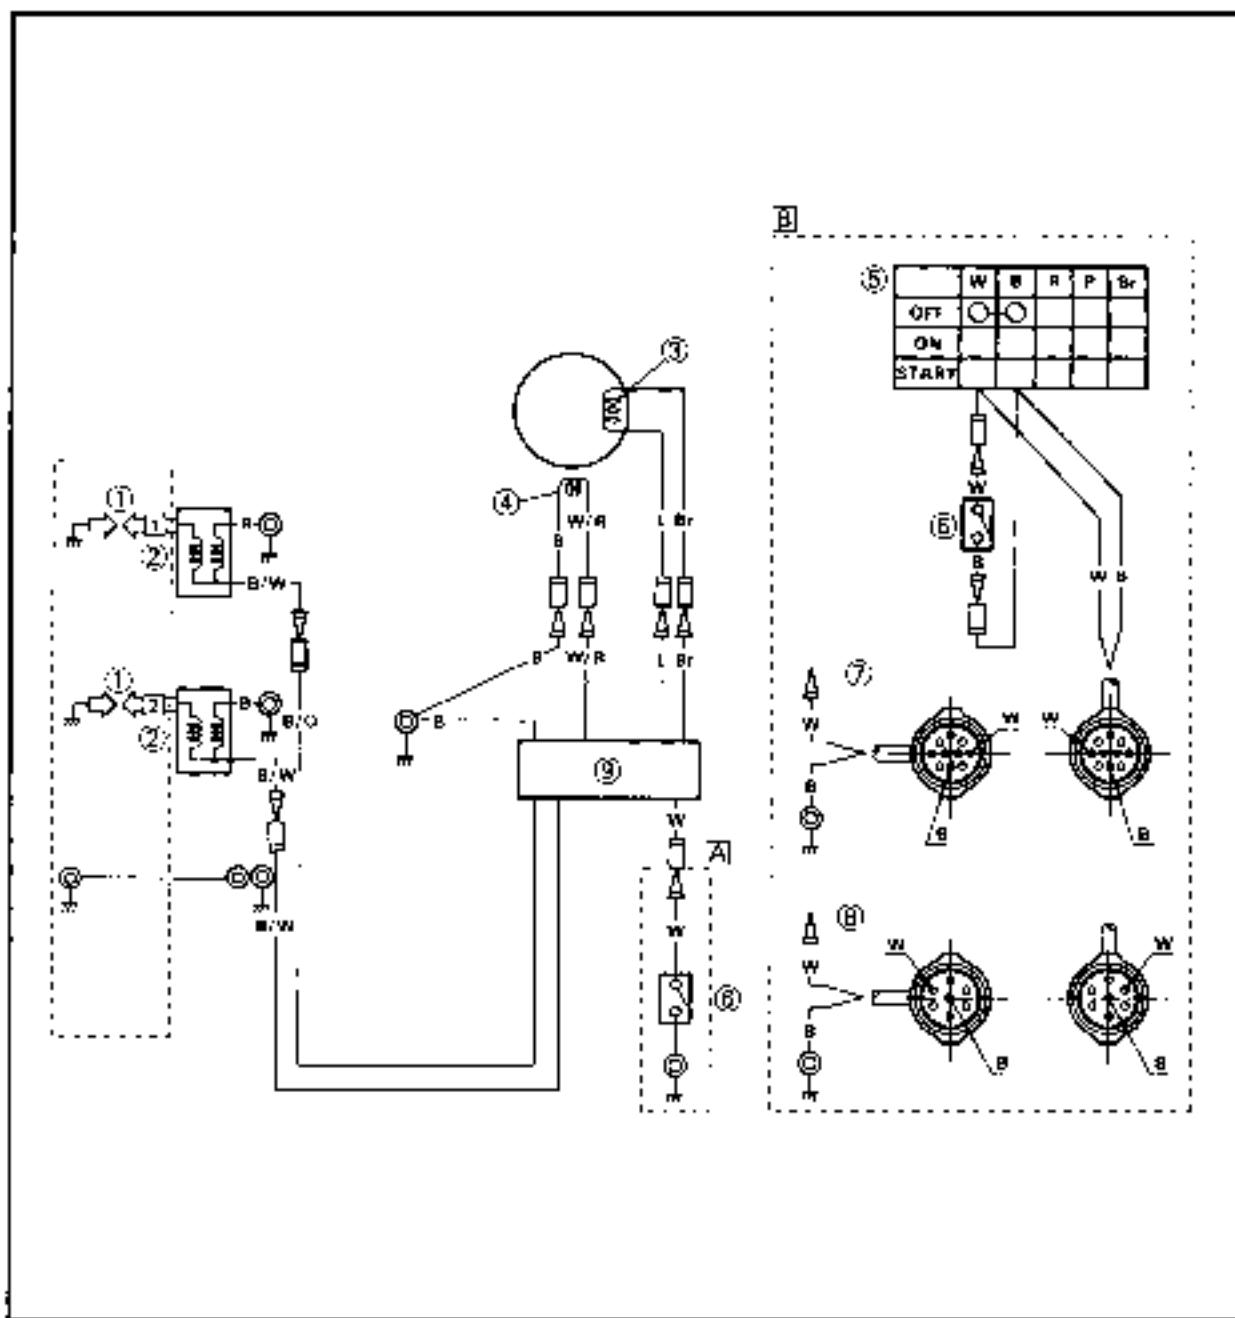

Peak volt adapter

YU-39991

## IGNITION SYSTEM

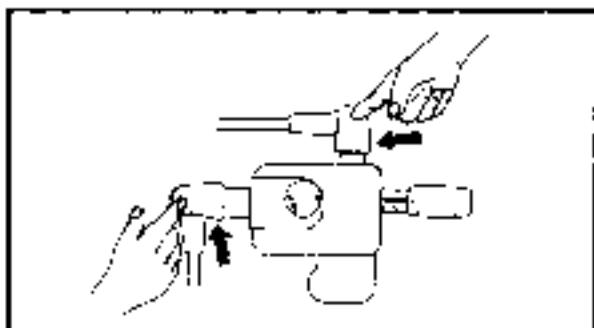

## WIRING DIAGRAM

- (1) Spark plug
- (2) Ignition coil
- (3) Charge coil
- (4) Pulser coil
- (5) Main switch
- (6) Engine stop switch
- (7) 10P coupler
- (8) 7P coupler
- (9) CDI unit

B : Brown  
 L : Blue  
 W/R : White/Red  
 B/O : Black/Orange  
 B/W : Black/White  
 W : White  
 B : Black

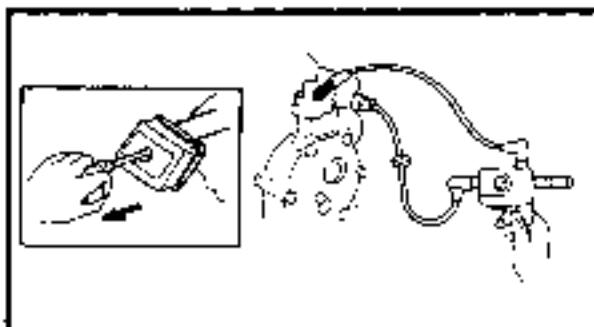

[A] except for remote control model  
 [B] for remote control model

## IGNITION SPARK GAP

**WARNING**

- While taking spark check be careful not to touch any connection or lead wires of the "Ignition spark gap tester".
- When doing the spark test, take special care not to allow leakage from the removed plug cap.
- This check is likely to produce sparks, so be sure that no flammable gas or fluid is in the vicinity.

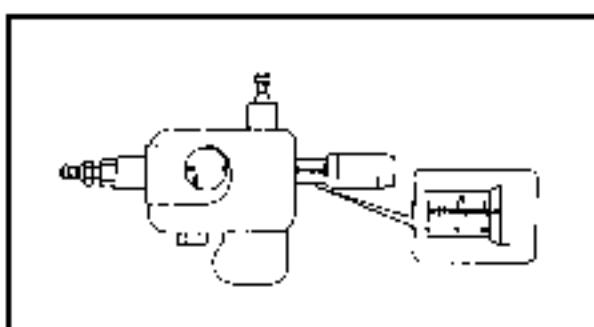

## 1. Check:

- Ignition spark gap  
Out of specification → Peak voltage measurement.

Spark gap:

9 mm (0.35 in)

## Checking steps:

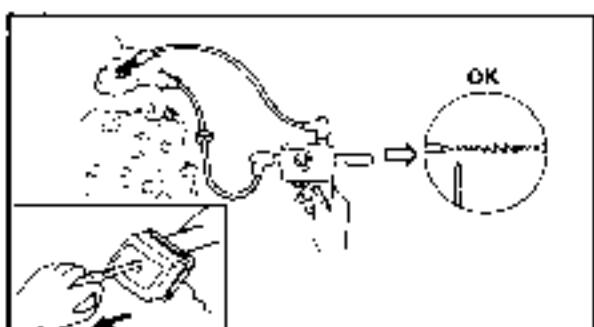

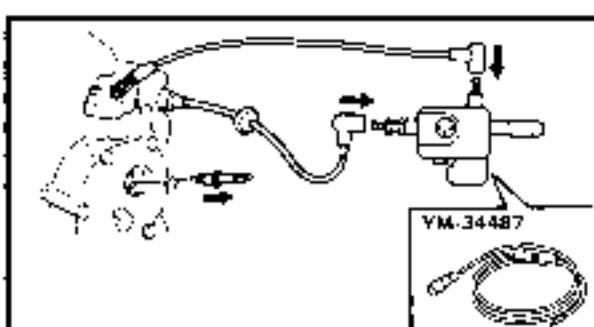

- Adjust the spark gap to specification by turning the adjusting knob.

Spark gap tester:

YM-34487/90890-06754

- Connect the spark-plug cap to the spark gap tester.
- Remove the spark plugs from the engine.
- Cranking the engine and check sparks of ignition system seen through discharge window

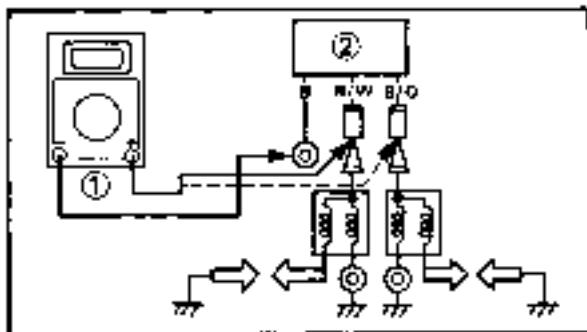

## CDI SYSTEM PEAK VOLTAGE

**WARNING**

While taking CDI unit check be careful not to touch any connection or lead wires.

**NOTE:**

- If there is no spark, or the spark is weak, continue with the CDI test.
- If a good spark is obtained, the problem is not with the CDI system, but possibly the spark plug or other component is defective.

## 1. Measure:

- CDI unit output (test #1)  
Below specification → Replace ignition coil.  
Repeat checking two times.

## CDI output:

170 V at cranking  
215 V at 1500 r/min

## Measurement steps:

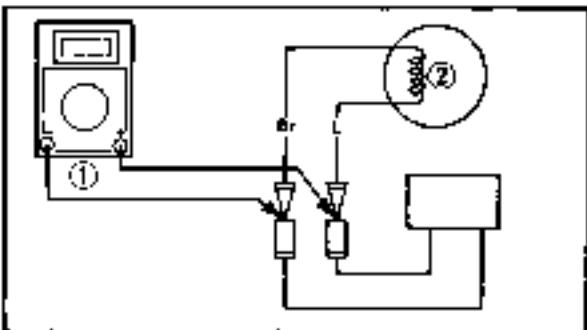

- Connect the tester ① to the CDI unit ② as shown.
- Set the tester dial to specification.

## Range:

—  
V

- Cranking or starting the engine.

**ELEC****IGNITION SYSTEM****2. Measure:**

- Charge coil output (test #2)  
Below specification → Replace charge coil.

**Charge coil output:**

200 V at cranking

250 V at 1500 r/min

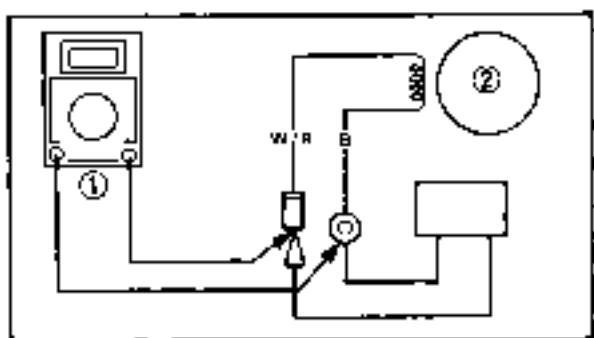

**Measurement steps:**

- Connect the tester (1) to the charge coil (2) as shown.
- Set the tester dial to specification.

**Range:**

V

- Cranking or starting the engine.

**3. Measure:**

- Pulser coil output (test #3)  
Beyond specification → Replace CDI unit.  
Below specification → Replace pulser coil.

**Pulser coil output:**

5 V at cranking

5 V at 1500 r/min

**Measurement steps:**

- Connect the tester (1) to the pulser coil (2) as shown.
- Set the tester dial to specification.

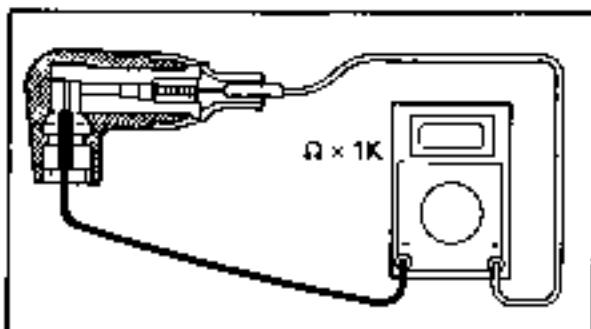

**Range:**

V

- Cranking or starting the engine.

**SPARK PLUG**

Refer to the "GENERAL" section in chapter 3.

**SPARK PLUG CAP**

## 1. Inspect:

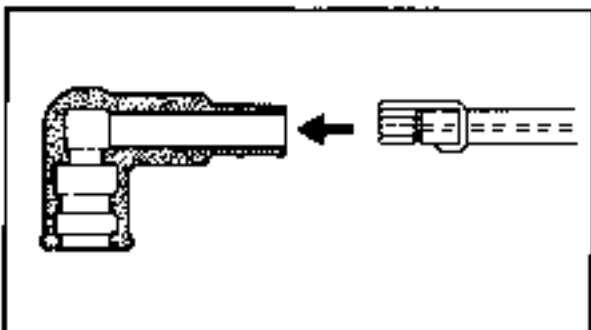

- Spark plug cap  
Loosen → Tighten.  
Crack/Damage → Replace.

## 2. Measure: (For Canada and Europe)

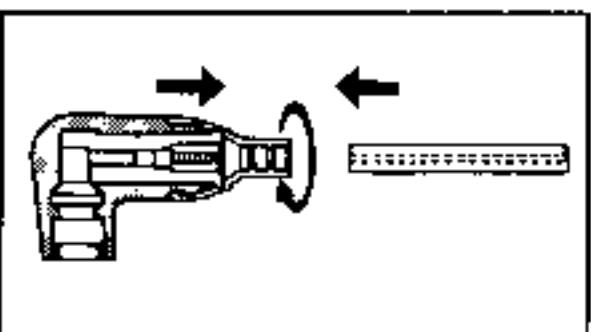

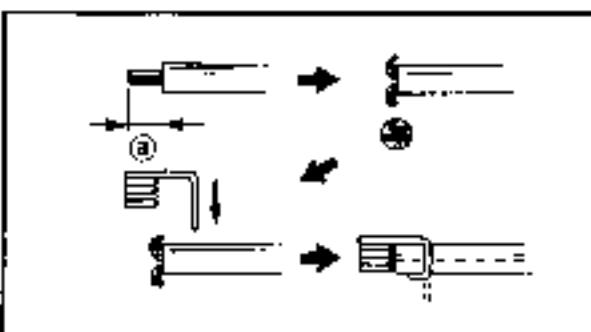

- Spark plug cap resistance  
Out of specification → Replace

**Spark plug cap resistance:**

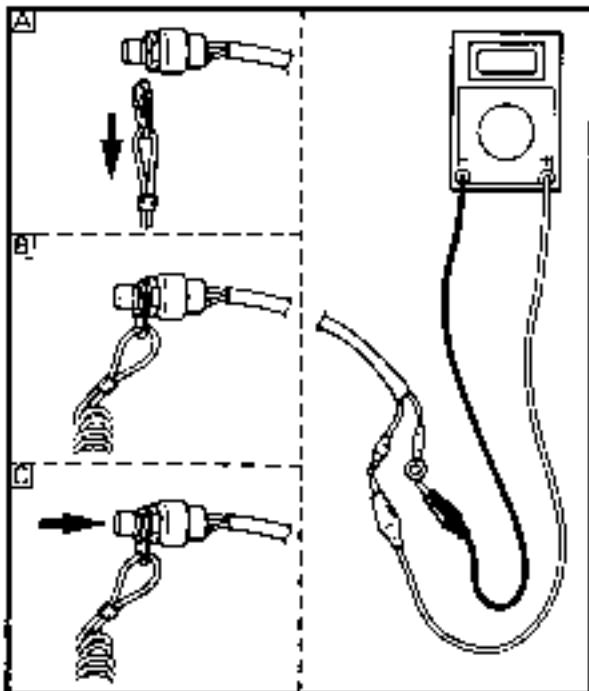

4.0 ~ 8.0 kΩ

**Replacement steps: (Except for Canada and Europe)**

- Remove the spark-plug cap by pulling the spark-plug cap.
- Remove the plug-cap spring.
- Strip the insulation cover 5 mm (0.2 in) (a), and spread the core wires outward.
- Fit the plug-cap spring close to the spread core wires and bend the spring end for clamping.
- Install the plug-cap spring into the spark-plug cap.

**Replacement steps: (For Canada and Europe)**

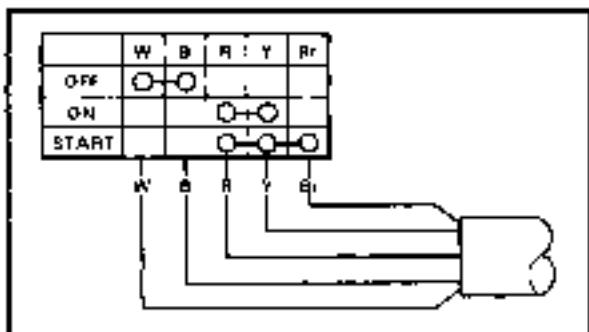

- Remove the spark-plug cap by turning the cap counterclockwise.
- Install the spark-plug cap by turning the cap clockwise until it stops.

**ENGINE STOP SWITCH**

## 1. Check:

- Continuity
- Out of specification → Replace.

	Leads color	
	White	Black
Remove the lock-plate A	<input type="checkbox"/>	<input type="checkbox"/>
Install the lock-plate B	<input type="checkbox"/>	<input type="checkbox"/>
Push the button C	<input type="checkbox"/>	<input type="checkbox"/>

**MAIN SWITCH**

## 1. Check:

- Continuity
- Out of specification → Replace.

	Leads color			
Switch position	White	Black	Red	Yellow Brown
OFF	<input type="checkbox"/>	<input type="checkbox"/>		
ON			<input type="checkbox"/>	<input type="checkbox"/>
START		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## **STARTING SYSTEM**

## **STARTING SYSTEM**

## WIRING DIAGRAM

- ① Fuse
  - ② 10P coupler
  - ③ 7P coupler
  - ④ Main switch
  - ⑤ Starter motor
  - ⑥ Battery
  - ⑦ Starter switch
  - ⑧ Neutral switch
  - ⑨ Starter relay

Except for remote control model

## Remote control model

**B · Black**

Br . Brown

R : Red

**BATTERY**

Refer to the "GENERAL" section in chapter 3.

**FUSE**

1. Check:

- Fuse
- Blown → Replace.

	<b>Fuse rating:</b>
	12 V - 20 A

**WIRING HARNESS**

1. Check:

- Continuity
- Discontinuity → Replace.

**WIRING CONNECTION**

1. Check:

- Wiring connection
- Poor connection → Correct

**ENGINE STOP SWITCH**

Refer to the "IGNITION SYSTEM" section.

**MAIN SWITCH**

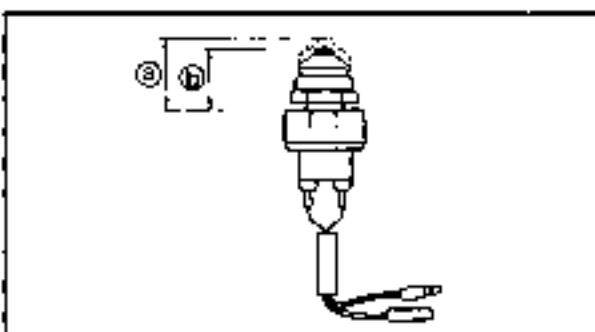

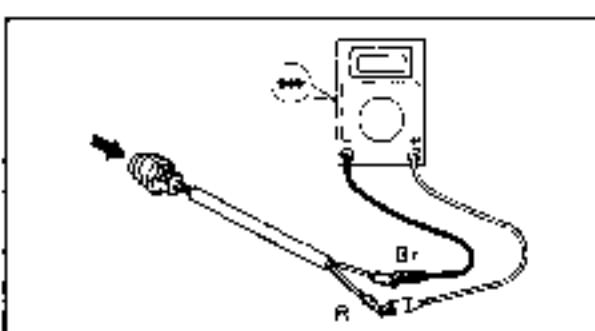

Refer to the "IGNITION SYSTEM" section.

**STARTER SWITCH**

1. Check:

- Continuity
- Out of specification → Replace.

	Leads color	
	Red	Brown
Free	—	—
Push	—	—

**NEUTRAL SWITCH**

1. Check:

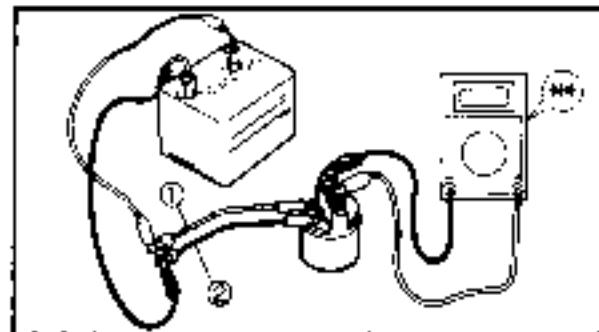

- Continuity
- Out of specification → Replace.

	Length	Leads color	
		Brown	Brown
Free	19.5 ~ 20.5 mm [0.77 ~ 0.81 in]	—	—
④	[0.77 ~ 0.81 in]	—	—
Push	18.5 ~ 19.5 mm [0.73 ~ 0.77 in]	—	—
⑤	[0.73 ~ 0.77 in]	—	—

**STARTER RELAY**

## 1. Inspect:

- Brown lead terminal
  - Black load terminal
- Loose → Tighten.

## 2. Check:

- Relay operation  
Does not function → Replace.

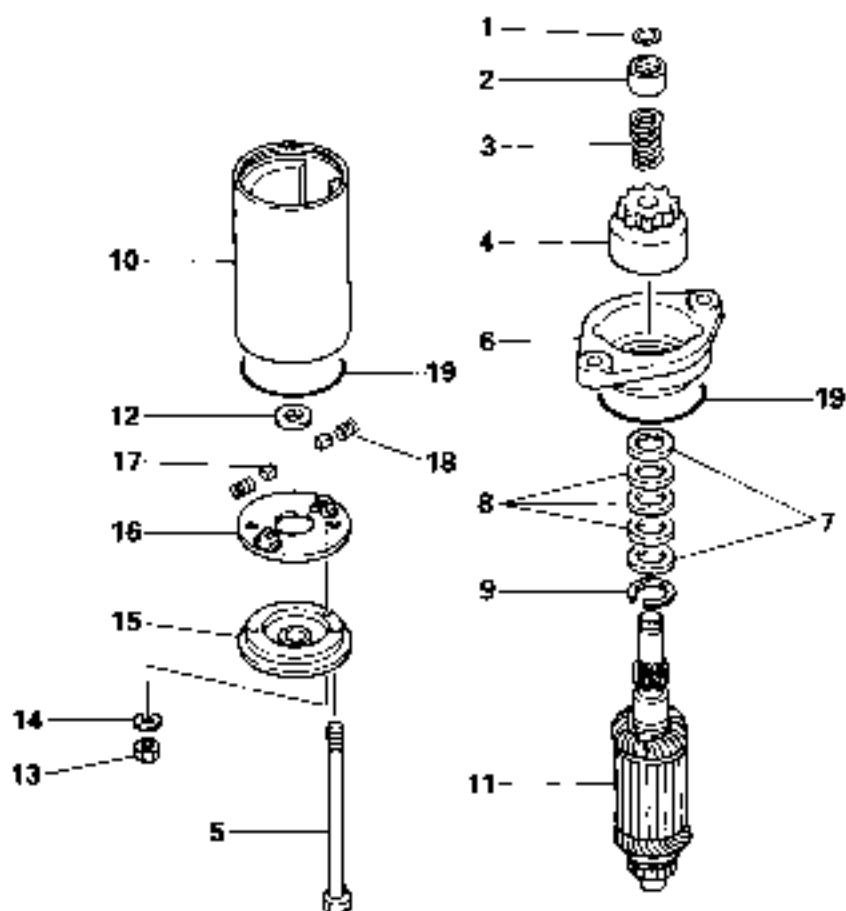

**Checking steps:**

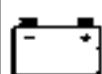

- Connect the tester between the terminals of the starter relay as shown.
- Connect a 12 V battery.

**Brown lead ① → Positive terminal**

**Black lead ② → Negative terminal**

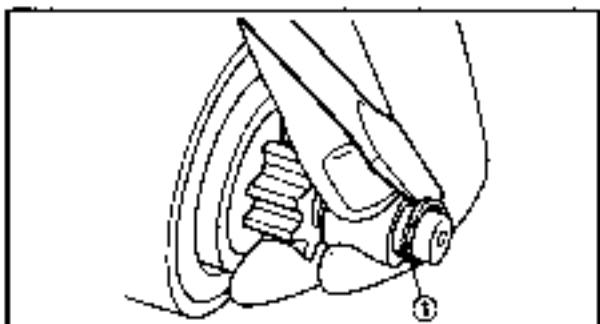

- Check that there is continuity between the starter relay terminals.

**ELEC****STARTER MOTOR****STARTER MOTOR****EXPLODED DIAGRAM**

## REMOVAL AND INSTALLATION CHART

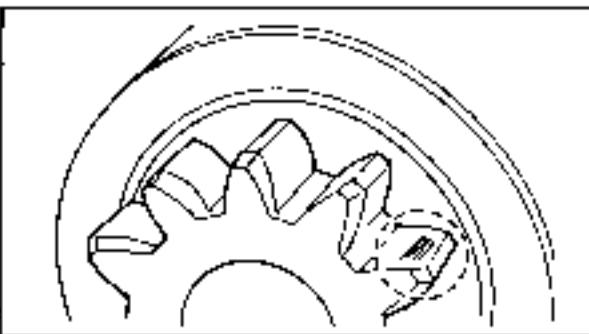

Step	Procedure/Part name	Q'ty	Service points
<b>STARTER MOTOR DISASSEMBLY</b>			
	Starter motor assembly		Follow the left "Step" for removal. Refer to the "ELECTRICAL UNIT REMOVAL" section in chapter 5.
1	Clip	1	
2	Pinion stopper	1	
3	Spring	1	
4	Pinion	1	
5	Through bolt	2	
6	Front cover	1	
7	Washer	2	0.5 mm
8	Washer	3	0.25 mm
9	Circlip	1	
10	Starter assembly	1	
11	Armature assembly	1	
12	Washer	1	1.0 mm
13	Nut	1	
14	Spring washer	1	
15	Rear cover	1	
16	Brush holder	1	
17	Brush	1	
18	Spring	2	
19	O-ring	2	
Reverse the removal steps for installation.			

**SERVICE POINTS****Pinion removal**

1. Remove:
  - Clip ①

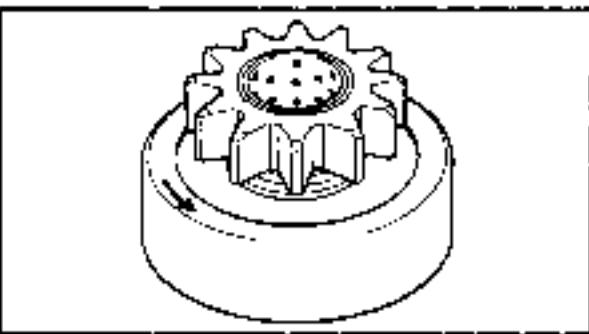

**NOTE:** \_\_\_\_\_

Using a pry-bar, pry off the clip.

**ELEC****STARTER MOTOR****Pinion inspection**

## 1. Inspect:

- Pinion teeth  
Wear/Damage → Replace.

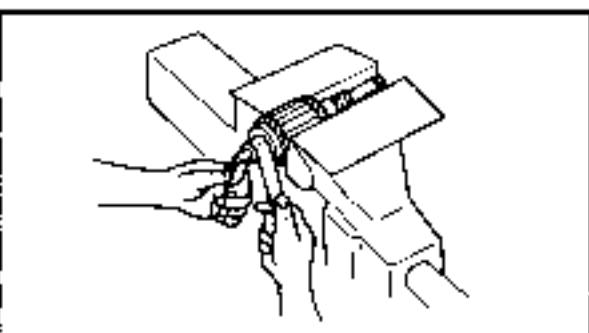

## 2. Check:

- Clutch movement  
Damage → Replace.

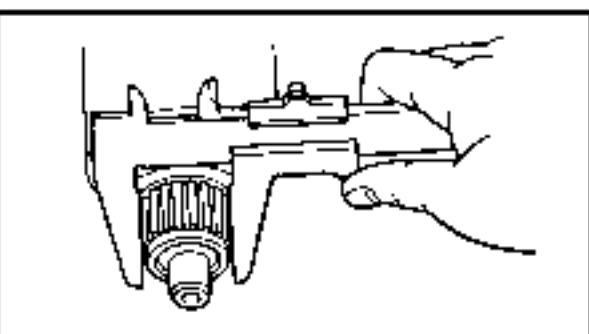

**NOTE:**

Rotate the pinion clockwise, and check that it rotates freely. Also try to rotate the pinion counterclockwise and confirm that it locks.

**Armature inspection**

## 1. Inspect:

- Commutator  
Dirty → Clean with #600 abrasive paper.

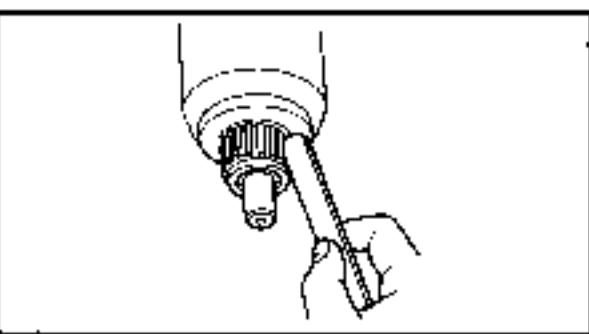

## 2. Measure:

- Commutator diameter  
Out of specification → Replace.

**Commutator diameter:**

Limit 19.4 mm (0.76 in)

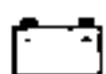

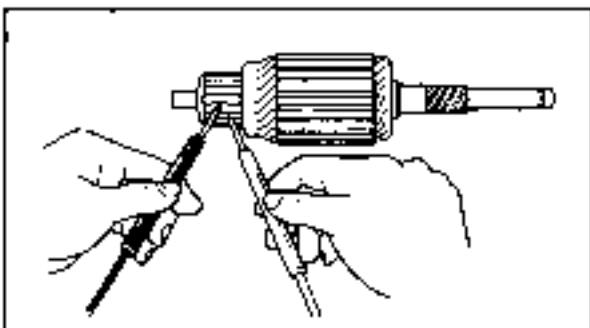

## 3. Check:

- Commutator under cut  
Clog/Dirty → Clean.

**NOTE:**

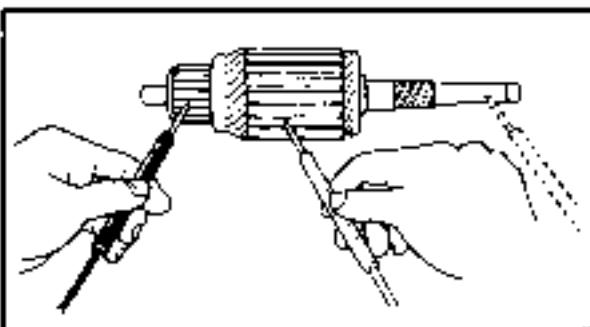

Removal all particles metal by compressed air.

**ELEC****STARTER MOTOR****4. Inspect:**

- Armature coil continuity  
Out of specification → Replace.

**Armature coil continuity:**

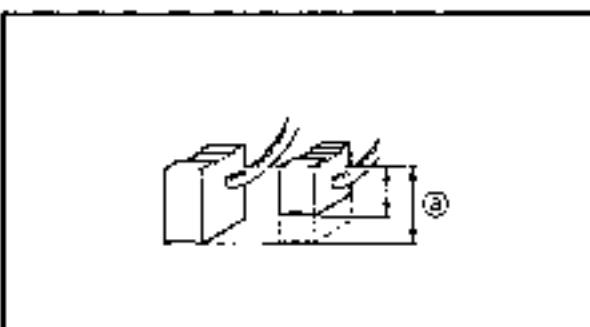

Commutator segments	Continuity
Segment - Laminations	Discontinuity
Segment - Shaft	Discontinuity

**Brush holder inspection****1. Measure:**

- Brush length  $\varnothing$   
Out of specification → Replace.

**Brush length  $\varnothing$ :**

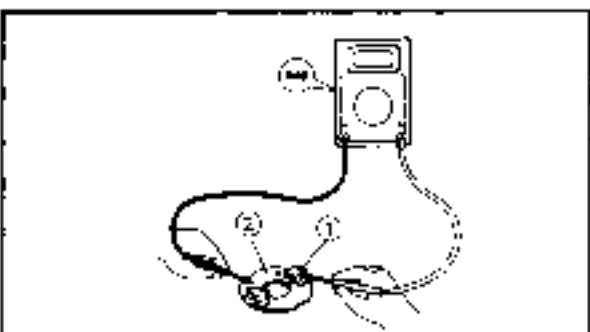

Limit 4.5 mm (0.18 in)

**2. Check:**

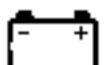

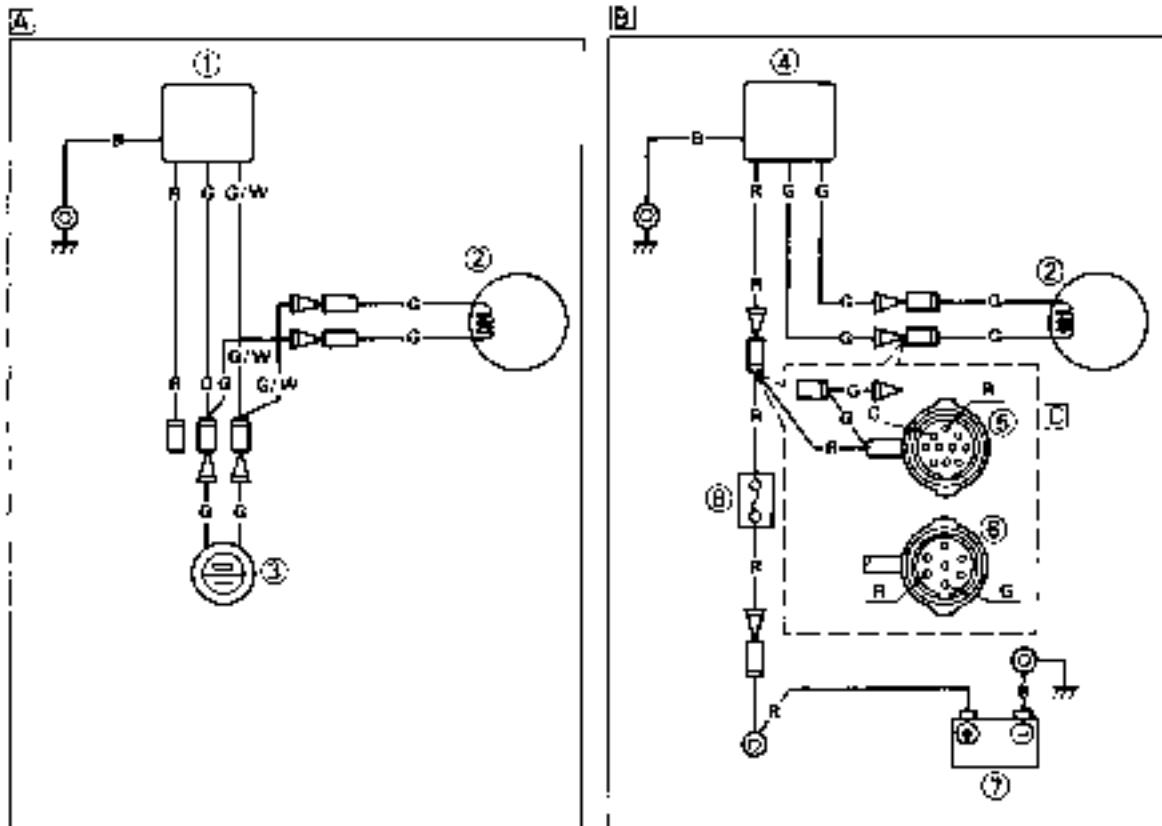

- Brush holder continuity  
Out of specification → Replace.

**Burush holder continuity:**

Burush holder $\odot$ - Base $\odot$	Discontinuity
--------------------------------------	---------------

**Cover inspection****1. Inspect**

- Cover bushing  
Wear/Damage → Replace the cover

**ELEC****CHARGING SYSTEM****CHARGING SYSTEM****WIRING DIAGRAM**

B : Black

### CHARGING SYSTEM PEAK VOLTAGE

#### 1 Measure:

- Rectifier output

Below specification → Lighting coil measurement.

#### Rectifier regulator output: (2P connector model)

11 V at cranking

13 V at 1500 r/min

#### Rectifier output: (electrical model)

11 V at cranking

13 V at 1500 r/min

#### Measurement steps:

- Connect the tester ① to the rectifier regulator ② / rectifier ③ as shown
- Set the tester dial to specification.

#### Range:

V

- Cranking or starting the engine.

#### 2 Measure:

- Lighting coil output

Beyond specification → Replace rectifier regulator/rectifier,

Below specification → Replace lighting coil.

#### Lighting coil output:

12 V at 1500 r/min

#### Measurement steps:

- Connect the tester ① to the lighting coil ③ as shown.
- Set the tester dial to specification.

#### Range:

V

- Starting the engine.

### FUSE

Refer to the "STARTING SYSTEM" section.

### BATTERY

Refer to the "GENERAL" section in chapter 3.

---

## CHAPTER 9

### TROUBLE ANALYSIS

TROUBLE ANALYSIS .....	9-1
TROUBLE ANALYSIS CHART .....	9-1

**TROUBLE ANALYSIS****NOTE:**

Following items should be obtained before "trouble analysis".

1. Battery is charged and its specified gravity is in specification.
2. There is no incorrect wiring connection.
3. Wiring connections are surely engaged and without any rust.
4. Lanyard is installed to the engine stop switch.
5. Shift position is in neutral.
6. Fuel is coming to the carburetor.
7. Correct rigging and engine setting are obtained.
8. Engine is free from any "Hull problem".

**TROUBLE ANALYSIS CHART**
